**Handbook of Material Culture** Chris Tilley, Webb Keane, Susanne Kuechler, Mike Rowlands, Patricia Spyer, 2006-01-05 The study of material culture is concerned with the relationship between persons and things in the past and in the present in urban and industrialized and in small scale societies across the globe The Handbook of Material Culture provides a critical survey of the theories concepts intellectual debates substantive domains and traditions of study characterizing the analysis of things It is cutting edge rather than simply reviewing the field as it currently exists It also attempts to chart the future the manner in which material culture studies may be extended and developed The Handbook of Material Culture is divided into five sections Section I maps material culture studies as a theoretical and conceptual field Section II examines the relationship between material forms the human body and the senses Section III focuses on subject object relations Section IV considers things in terms of processes and transformations in terms of production exchange and consumption performance and the significance of things over the long term Section V considers the contemporary politics and poetics of displaying representing and conserving material and the manner in which this impacts on notions of heritage tradition and identity The Handbook charts an interdisciplinary field of studies that makes a unique and fundamental contribution to an understanding of what it means to be human It will be of interest to all who work in the social and historical sciences from anthropologists and archaeologists to human geographers to scholars working in heritage design and cultural studies      Beyond BIM Danelle Briscoe, 2015-10-14 Beyond BIM explores the vast and under explored design potential undertaken by information modeling Through a series of investigations grounded in the analysis of built work interviews with leading practitioners and speculative projects the author catalogs the practical advantages and theoretical implications of exploiting BIM as a primary tool for design innovation Organized by information type such as geographic data local code or materials each chapter suggests a realm of knowledge that can be harvested and imported into BIM to give meaningful specificity to architectural form and space While highly sustainable the work documented and envisioned in this book moves well beyond normalization to reveal inventive takes on contemporary practice Beyond BIM serves as a primary resource for professional architects from practice researchers and designers engaged in information related spatial design processes as well as students and faculties of architecture schools in search of BIM design inspiration Likewise those highly attuned to computation and unconventional ways of creating form and space particularly built outcomes that utilize BIM will find this book meaningful and essential

**Two Spheres** Leonard Bachman, 2012-06-14 Explaining the connection between physical and strategic design this book

proposes an aesthetic connection between two equal aspects of architectural design the Real and the Ideal Addressing architectural thinkers from the broad realms of academia and practice it is suitable either as a seminar text a guide to contemporary design issues or as a theoretical work Beginning with a historical perspective the book looks at some of the key conflicts in architectural thought that were brought about by postindustrial change The discussion shifts to clearly describe the forms of complexity how these have interacted with architecture and the possibilities in fully embracing complexity in architectural practice Although there are many books focusing on complexity science there are few that focus on the relationship between complexity and design and none which take such a comprehensive approach      **Embracing**

underscores the potential of past and often forgotten technologies and how they can inform sustainable energy practices. Sometimes past technologies can be copied without any changes. More often interesting possibilities arise when older technology is combined with new knowledge and new materials or when past concepts and traditional knowledge are applied to modern technology. Inspiration is also to be found in the so called developing world where resource constraints often lead to inventive low tech solutions.

**Solar Energy at Urban Scale** Benoit Beckers, 2013-03-04

Increasing urbanization throughout the world, the depletion of fossil fuels and concerns about global warming have transformed the city into a physical problem of prime importance. This book proposes a multi disciplinary and systematic approach concerning specialities as different as meteorology, geography, architecture and urban engineering systems all surrounding the essential problem of solar radiation. It collects the points of view of 18 specialists from around the world on the interaction between solar energy and constructions combining territorial, urban and architectural scales to better regulate energetic efficiency and light comfort for the sustainable city. The main subjects covered are measures and models of solar irradiance, satellite observations, territorial and urban ground measurements, sky models, satellite data and urban mock up, radiative contribution to the urban climate, local heat balance, radiative aerodynamics, coupling evapotranspiration, Urban Heat Island, light and heat modeling, climate based daylight modeling, geometrical models of the city, solar radiation modeling for urban environments, thermal simulation methods and algorithms and urban planning with special considerations for solar potential, solar impact and daylight rights in the temperate, northern and tropical climates and the requirement of urban solar regulation.
