**The Symbolic Species: The Co-evolution of Language and the Brain** Terrence W. Deacon, 1998-04-17 A work of enormous breadth likely to pleasantly surprise both general readers and experts New York Times Book Review This revolutionary book provides fresh answers to long standing questions of human origins and consciousness Drawing on his breakthrough research in comparative neuroscience Terrence Deacon offers a wealth of insights into the significance of symbolic thinking from the co evolutionary exchange between language and brains over two million years of hominid evolution to the ethical repercussions that followed man s newfound access to other people s thoughts and emotions Informing these insights is a new understanding of how Darwinian processes underlie the brain s development and function as well as its evolution In contrast to much contemporary neuroscience that treats the brain as no more or less than a computer Deacon provides a new clarity of vision into the mechanism of mind It injects a renewed sense of adventure into the experience of being human

**The Symbolic Species** Terrence William Deacon, 1997 Discusses the evolution of language from the viewpoint of symbolic reference as opposed to the conventional grammar based theories **The Symbolic Species** Terrence W. Deacon, 1998 Human language is one of the most distinctive behavioural adaptations on the planet Languages evolved in only one species in only one way without precedent and without parallel Hundreds of millions of years of evolution have produced hundreds of thousands of species with brains and tens of thousands with complex learning abilities Only one of these has ever wondered about its place in the whole scheme because only one through its language evolved with the ability to do so This book aims to alter the understanding of what it means to be human the universe isn t a soulless blindly spinning clockwork but instead nascent hear and mind

**The Symbolic Species** Terrence William Deacon, 1997 **The Coevolution of Language, Teaching, and Civil Discourse Among Humans** Donald M. Morrison, 2020-07-25 This book traces the evolutionary trajectory of language and teaching from the earliest periods of human evolution to the present day The author argues that teaching is unique to humans and our ancestors and that the evolution of teaching language and culture are the inextricably linked results of gene culture coevolutionary processes Drawing on related fields including archaeology palaeontology cultural anthropology evolutionary psychology and linguistics he makes the case that the need for joint attention and shared goals in complex adaptive strategies is the underlying driver for the evolution of language like communication This book will be of interest to students and scholars of these disciplines as well as lay readers with an interest in human origins

**Evolution Of Language, The - Proceedings Of The 7th International Conference (Evolang7)** Andrew D M Smith, Kenny Smith, Ramon Ferrer I Cancho, 2008-02-22 This volume comprises refereed papers and abstracts from the 7th International Conference on the Evolution of Language EVOLANG7 held in Barcelona in March 2008 As the leading international conference in the field the biennial EVOLANG meeting is characterized by an invigorating multidisciplinary approach to the origins and evolution of human language and brings

together researchers from many fields including anthropology archeology artificial life biology cognitive science computer science ethology genetics linguistics neuroscience paleontology primatology psychology and statistical physics The latest theoretical experimental and modeling research on language evolution is presented in this collection It includes contributions from leading scientists such as Derek Bickerton Rudolf Botha Camilo Cela Conde Francesco d'Erice Susan Goldin Meadow Simon Kirby Gary Marcus Friedemann Pulvermüller and Juan Uriagereka

**Mirror Neurons and the Evolution of Brain and Language** Maxim I. Stamenov, Vittorio Gallese, 2002-12-17 The emergence of language social intelligence and tool development are what made homo sapiens sapiens differentiate itself from all other biological species in the world The use of language and the management of social and instrumental skills imply an awareness of intention and the consideration that one faces another individual with an attitude analogical to that of one's own The metaphor of mirror aptly comes to mind Recent investigations have shown that the human ability to mirror other's actions originates in the brain at a much deeper level than phenomenal awareness A new class of neurons has been discovered in the premotor area of the monkey brain mirror neurons Quite remarkably they are tuned to fire to the enaction as well as observation of specific classes of behavior fine manual actions and actions performed by mouth They become activated independent of the agent be it the self or a third person whose action is observed The activation in mirror neurons is automatic and binds the observation and enaction of some behavior by the self or by the observed other The peculiar first to third person intersubjectivity of the performance of mirror neurons and their surprising complementarity to the functioning of strategic communicative face to face first to second person interaction may shed new light on the functional architecture of conscious vs unconscious mental processes and the relationship between behavioral and communicative action in monkeys primates and humans The present volume discusses the nature of mirror neurons as presented by the research team of Prof Giacomo Rizzolatti University of Parma who originally discovered them and the implications to our understanding of the evolution of brain mind and communicative interaction in non human primates and man Series B

Rethinking Human Evolution Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology's history of procedural idiosyncrasies the role

of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho Fabrizio Mc Manus Apurva Narechania Michael D Petraglia Thomas W Plummer J W F Reumer Jeff Rosenfeld Jeffrey H Schwartz Dietrich Stout Ian Tattersall Alan R Templeton Michael Tessler Peter J Waddell Martine Zilversmit

*Theological Anthropology in the Anthropocene* Jan-Olav Henriksen, 2022-12-14 The Anthropocene presents theology and especially theological anthropology with unprecedented challenges There are no immediately available resources in the theological tradition that reflect directly on such experiences Accordingly the situation calls for contextually based theological reflection of what it means to be human under such circumstances This book discusses the main elements in theological anthropology in light of the fundamental points a that theological anthropology needs to be articulated with reference to and informed by the concrete historical circumstances in which humanity presently finds itself and b that the notion of the Anthropocene can be used as a heuristic tool to describe important traits and conditions that call for a response by humanity and which entail the need for a renewal of what a Christian self understanding means Jan Olav Henriksen explores what such a response entails from the point of view of contemporary theological anthropology and discusses selected topics that can contribute to a contextually based position

The Evolution of Human Cleverness Richard Hallam, 2022-05-01 The Evolution of Human Cleverness presents a unique introduction to the way human cognitive abilities have evolved The book comprises a series of mini essays on distinct topics in which technical terms are simplified considering how humans made the long journey from our ape like ancestors to become capable of higher level reasoning and problem solving All the topics are cross linked allowing the reader to dip in and out but certain key concepts run through the underlying reasoning Chiefly these are adaptation and selection the distinction between ultimate and proximate causes of behaviour gene culture co evolution and domain general versus domain specific cognitive processes The book should help the reader draw lessons for the human species as a whole especially in view of the environmental threats to its own existence Entries have been carefully crafted to cut through scientific jargon providing bite sized and digestible chunks of knowledge making the topic accessible for students and lay readers alike The author draws on research from diverse fields including Psychology Anthropology Archaeology Biology and Neuroscience to provide an unbiased account of the field making it an ideal text for students of all levels
