Symmetry A Unifying Concept:

Symmetry István Hargittai, Magdolna Hargittai, 1994 Explains and illustrates some fifteen aspects of symmetry related subjects **Candid Science V** Balazs Hargittai, István Hargittai, 2005 Candid Science V Conversations with Famous Scientists contains 36 interviews with well known scientists including 19 Nobel laureates Wolf Prize winners and other luminaries These in depth conversations provide a glimpse into the greatest achievements in science during the past few decades featuring stories of the discoveries and showing the human drama behind them **Out of this World** Stephen Webb, 2013-04-17 Stephen Webb author of WHERE IS EVERYBODY takes the interested amateur on a thrilling and enlightening tour of the amazing even bizarre new ideas of modern physics including alternatives to the Big Bang parallel universes and an imaginary trip to the other side of the black hole **Candid Science VI** István Hargittai, Magdolna Hargittai, 2006 Candid Science VI concludes the series by narrating the conversations with famous scientists from the biomedical sciences chemistry and physics There are 31 Nobel laureates and 11 other luminaries among them The scientists are in the field of biomedical sciences chemistry and physics **The Man Who Saved Geometry** Siobhan Roberts, 2024-10-29 An illuminating biography of one of the greatest geometers of the twentieth century Driven by a profound love of shapes and symmetries Donald Coxeter 1907-2003 preserved the tradition of classical geometry when it was under attack by influential mathematicians who promoted a more algebraic and austere approach His essential contributions include the famed Coxeter groups and Coxeter diagrams tools developed through his deep understanding of mathematical symmetry The Man Who Saved Geometry tells the story of Coxeter's life and work placing him alongside history's greatest geometers from Pythagoras and Plato to Archimedes and Euclid and it reveals how Coxeter's boundless creativity reflects the adventurous ever evolving nature of geometry itself With an incisive touching foreword by Douglas R Hofstadter The Man Who Saved Geometry is an unforgettable portrait of a visionary mathematician **Buried Glory** István Hargittai, 2013-09-19 Moscow's Novodevichy Cemetery is the final resting place of some of Russia's most celebrated figures from Khrushchev and Yeltsin to Anton Chekhov Sergei Eisenstein Nikolai Gogol and Mikhail Bulgakov Using this famed cemetery as symbolic starting point Buried Glory profiles a dozen eminent Soviet scientists nine of whom are buried at Novodevichy men who illustrate both the glorious heights of Soviet research as well as the eclipse of science since the collapse of the USSR Drawing on extensive archival research and his own personal memories renowned chemist István Hargittai brings these figures back to life placing their remarkable scientific achievements against the tense political backdrop of the Cold War Among the eminent scientists profiled here are Petr L Kapitza one of the most brilliant representatives of the great generation of Soviet physicists a Nobel Prize winner who risked his career and his life standing up for fellow scientists against Stalin Yulii B Khariton who ran the highly secretive Soviet nuclear weapons laboratory Arzamas 16 despite being Jewish and despite the fact that his father Boris had been sent to the labor camps And Andrei D Sakharov the father of the Soviet hydrogen bomb and a brilliant fighter for human rights for which he won the

Nobel Peace Prize Along the way Hargittai shines a light on the harrowing conditions under which these brilliant researchers excelled Indeed in the post war period Stalin s anti Semitism and ongoing anti science measures devastated biology damaged chemistry and nearly destroyed physics The latter was saved only because Stalin realized that without physics and physicists there could be no nuclear weapons The extraordinary scientific talent nurtured by the Soviet regime belongs almost entirely to the past Buried Glory is both a fitting tribute to these great scientists and a fascinating account of scientific work behind the Iron Curtain

Drive and Curiosity Istvan Hargittai,2010-04-13 What motivates those few scientists who rise above their peers to achieve breakthrough discoveries This book examines the careers of fifteen eminent scientists who achieved some of the most notable discoveries of the past century providing an insider s perspective on the history of twentieth century science based on these engaging personality profiles They include Dan Shechtman the 2011 Nobel laureate and discoverer of quasicrystals James D Watson the Nobel laureate and codiscoverer of the double helix structure of DNA Linus Pauling the Nobel laureate remembered most for his work on the structure of proteins Edward Teller a giant of the 20th century who accomplished breakthroughs in understanding of nuclear fusion George Gamow a pioneering scientist who devised the initially ridiculed and now accepted Big Bang In each case the author has uncovered a singular personality characteristic motivational factor or circumstance that in addition to their extraordinary drive and curiosity led these scientists to make outstanding contributions For example Gertrude B Elion who discovered drugs that saved millions of lives was motivated to find new medications after the deaths of her grandfather and later her fianc F Sherwood Rowland who stumbled upon the environmental harm caused by chlorofluorocarbons eventually felt a moral imperative to become an environmental activist Rosalyn Yalow the codiscoverer of the radioimmunoassay always felt she had to prove herself in the face of prejudice against her as a woman These and many more fascinating revelations make this a must read for everyone who wants to know what traits and circumstances contribute to a person s becoming the scientist who makes the big breakthrough

Wisdom of the Martians of Science Istvan E. T. Al HARGITTAI,2015-12-10 Wisdom of the Martians of Science refers to five scientists whose brilliance contributed to shaping the modern world John von Neumann was a pioneer of the modern computer Theodore von K r m n was the scientist behind the US Air Force Leo Szilard initiated the development of nuclear weapons the Nobel laureate Eugene P Wigner was the world s first nuclear engineer and Edward Teller was the father of the hydrogen bomb They were born and raised in Budapest were forced out of Hungary and then from Germany they became Americans and devoted themselves to the defense of the United States and the Free World They contributed significant discoveries to fundamental science ranging from the properties of materials to the application of the symmetry principle in physics to creating information theory to game theory The areas in which we can learn about their wisdom include applications of science to past present and future real world needs defense education environment human nature humor politics religion weather modification and others This book shows the wisdom of the Martians by presenting their thoughts and ideas in their

own words and placing them into context Their wisdom is intriguing witty provocative and thought provoking It extended over many aspects of life and culture that impinge on our existence While we cannot always agree with what they say they are never boring The power of their words and their philosophies will inspire the readers to pursue their own dreams
