Synergetic Economics Time And Change In Nonlinear Economics:

Synergetic Economics Wei-Bin Zhang, 2013-03-07 Synergetic Economics presents a new advance in analytical economics. It deals with problems related to time and change in economic systems including complex aspects such as the effects of nonlinearity, instability, bifurcation, and chaos in economic evolution. The author argues that economic systems may run through a hierarchy of instabilities in which more and more structural patterns evolve. Such instabilities are caused by changes in the external parameters of the system. They may lead to new spatial-temporal patterns of the system. A number of explicit examples are provided to show how such behavior can occur in various dynamic economic systems. Analytical methods are also presented to cope with nonlinear problems. Of particular interest are sudden structural changes, the existence of regular and irregular oscillations, the role of random factors in economic evolution, and the effects of time scales and rates of adjustment of economic variables in economic analysis. The author carefully examines the implications of nonlinear phenomena for decision making and for economic development in general.

Nonlinear Evolution of Spatial Economic Systems Peter Nijkamp, Aura Reggiani, 2012-12-06 Is our world more dynamic than it used to be in the past? Have phenomena in the social science field become unpredictable? Are chaotic events nowadays occurring more frequently than in the past? Such questions are often raised in popular debates on nonlinear evolution and self-organizing systems. At the same time, many scientists are also raising various intriguing methodological issues. Is it possible to separate deterministic chaos from random disturbances if their trajectories are almost similar? Is prediction still possible in a world of chaos? Poincaré: Is it possible to distinguish specification errors from measurement errors in a nonlinear dynamic model? Is evolution a random process? The list of such questions can easily be extended with dozens of others. But despite the myriad of questions on problems of nonlinear evolution, one common trait is evident in both the natural and the social sciences: we are still groping in the dark in areas which are par excellence promising hunting grounds for exploratory and exploratory research, viz. structural grounds in an

uncertain nonlinear world The present book aims at offering a collection of refreshing contributions to the above research issues by focusing attention in particular on nonlinear dynamic evolution in space at the Netherlands Institute for Advanced Study NIAS in Wassenaar the Netherlands The Institute has to be thanked for its hospitality and support reflected inter alia in a workshop at which several of the papers included in this book were discussed From Catastrophe to Chaos: A General Theory of Economic Discontinuities J. Barkley Rosser, 2013-03-14 From Catastrophe to Chaos A General Theory of Economic Discontinuities presents an unusual perspective on economics and economic analysis Current economic theory largely depends upon assuming that the world is fundamentally continuous However an increasing amount of economic research has been done using approaches that allow for discontinuities such as catastrophe theory chaos theory synergetics and fractal geometry The spread of such approaches across a variety of disciplines of thought has constituted a virtual intellectual revolution in recent years This book reviews the applications of these approaches in various subdisciplines of economics and draws upon past economic thinkers to develop an integrated view of economics as a whole from the perspective of inherent discontinuity **Metropolitan Regions** Johan Klaesson, Börje Johansson, Charlie Karlsson, 2013-06-05 Metropolitan growth has been dramatic in the past several decades and today metropolitan regions are recognized as the main driving forces in national growth and development as well as in national and global innovation processes The purpose of this book is to contribute to a better understanding of how metropolitan regions and their subsystems interact and compete why they differ in their capacity to nurture innovation and growth and how metropolitan policies must be designed to secure the region's long term vitality To that end it presents new contributions on theories of urban growth institutions and policies of urban change and case studies of urban growth prepared by international experts *Complexity and Self-Organization in Social and Economic Systems* Fukang Wang, Michele Sanglier, 2012-12-06 The Instituts Internationaux de Physique et de Chimie fondis par E Solvay and the Institute of Nonequilibrium systems of Beijing Normal University jointly sponsored a conference on The Complexity and Self organization in Socio economic Systems on October 17-20 1994 at Beijing China The purpose of the conference was to explore the complexity and evolutionary laws of socio economic systems through nonlinear dynamic systems and self organization theory The conference was chaired by Professor M Sanglier and Professor Fang Fukang and was introduced by the Nobel prize winner Professor I Prigogine and the vice director of the Chinese National System Reform Committee Mr Wu Jie The conference was held at an important time On the one hand the research in the natural sciences about the evolution of complex systems has made great progress modern scientific theories such as nonlinear dynamic system theory and self organization theory are becoming more and more mature and a series of methods dealing with these complex systems are being developed which enable us to understand and study non equilibrium uncertainty and instability On the other hand human societies around the world witness a general increase of connectedness interactivity and an increase of reaction speeds to decisions In this context the deterministic linear way of thinking becomes more and more

inadequate and this stimulates the development of non linear science **Ambiguity in Mind and Nature** Peter Kruse, Michael Stadler, 2012-12-06 Ambiguity in Mind and Nature is the result of cognitive multistability the phenomenon in which an unchanging stimulus usually visual gives rise in the subject to an oscillating perceptual interpretation The vase face picture is one of the most famous examples In this book scientists from many disciplines including physics biology psychology maths and computer science present recent progress in this fascinating area of cognitive science Using the phenomenon of multistability as a paradigm they seek to understand how meaning originates in the brain as a consequence of cognitive processes New advances are achieved by applying concepts such as self organization chaos theory and complex systems to the latest results of psychological and neurophysical experiments New Keynesian Economics/post Keynesian Alternatives Roy Jeffrey Rotheim, 1998 New Keynesian Economics has been the most significant development in economics in recent years However many modern thinkers have asked whether it actually builds upon or merely distorts Keynes work This unique volume provides the first full scale critique of the New Keynesian school of thought Within its pages Post Keynesian economists including many from the United States challenge New Keynesianism both on the grounds that it is not Keynesian and does not provide an adequate account of our current economic problems Sure to provoke much new debate and even controversy New Keynesian Economics seeks to reconcile these two seemingly intractable systems **New Keynesian Economics / Post Keynesian Alternatives** Roy Rotheim, 2013-03-07 The New Keynesian Economics has been the most significant development in economics in recent years Does it actually build upon Keynes work In this volume leading post Keynesian economists challenge New Keynesianism both on the grounds that it is not Keynesian and does not provide an adequate account of our current economic problems Sociodynamics Wolfgang Weidlich, 2013-01-18 Highly recommended This is an important book in putting the burgeoning field of sociodynamics on a solid footing Journal of Artificial Societies and Social Simulation This text deals with general modelling concepts in the social sciences their applications and their mathematical methods The author's well organized approach offers a clear coherent introduction to terminology approaches and goals in modelling Appropriate for advanced undergraduates and graduate students it requires a solid background in algebra and calculus The three part treatment begins by addressing general modelling concepts the second part provides applications and the third discusses mathematical method Topics include population dynamics group interaction political transitions evolutionary economics and urbanization Guiding students through a series of practical applications that illustrate the methods potential scope the text concludes with a detailed look at mathematical methods
