Taking Population Seriously:

Taking Sustainable Cities Seriously Kent E. Portney, 2002-11-22 Today at least twenty five major U S cities have pursued some form of sustainability initiative Although many case studies and how to manuals have been published there has been little systematic comparison of these cities programs and initiatives In this book Kent Portney lays the theoretical groundwork for research on what works and what does not and why Distinguishing cities on the basis of population characteristics and region for his analysis Portney shows how cities use the broad rubric of sustainability to achieve particular political ends Cities that take sustainability seriously such as Portland San Francisco and Seattle use broad definitions that go well beyond concern for the physical environment or creating jobs They pursue sustainability at many levels and integrate concern for economic development the environment and quality of life across all activities of city government Cities that take sustainability less seriously such as Cleveland Boston and Orlando confine it to such issues as solid waste disposal brownfields redevelopment and neighborhood beautification Still other cities such as New Haven Brownsville and Milwaukee do considerably less to work toward sustainability Portney begins by reviewing the conceptual underpinnings of sustainable development and sustainable communities The comparisons that follow provide a foundation for assessing the range of what is possible and desirable for sustainability initiatives In the book s conclusion Portney assesses the extent to which cities can use the pursuit of sustainability either to foster change in public values or merely to reinforce values that are already reflected in systems of governance

Taking Employment Discrimination Seriously Yuwen Li, J. E. Goldschmidt, 2009 Employment discrimination is present in any society However this severe social problem has escalated in the post Mao era in China The imbalance between supply and demand in the labour market combined with a lack of general consciousness regarding labour rights have contributed to the swift spread of discrimination This book contains the most recent research on the reality of discrimination in China and advocates for effective employment equality protection through law and specialised equality institutions The study of equal treatment in the legal systems of the EU illustrates the important contribution law together with general policies can make to the improvement of equality in employment While both systems face a distinctive range and degree of problems employment discrimination ought to be taken seriously in China and the countries of the EU

Taking Economic, Social and Cultural Rights Seriously in International Criminal Law Evelyne Schmid, 2015-04-02 Evelyne Schmid demonstrates how violations of economic social and cultural rights can overlap with international crimes

Some Have Babies; Others, Regrets! Philip P. Eapen, 2010-03-20 Some Have Babies Others Regrets examines the relevance of the creation mandate for human beings to multiply and fill the earth in today s world It evaluates popular notions about the world being over populated in the light of available scientific evidence

When the Bough Breaks... Laura Thomas, 2013-11-05 TO ACCOMPANY A MAJOR ITV DOCUMENTARY We are poisoning our planet and destroying the lives of our children In the west arguments rage over how much nuclear radiation and toxic dumping is safe

while children continue to breath filthy air and eat food full of pesticides In the third World over four million children die each year from drinking unclean water Adults make the decisions but children pay the highest price They are physically vulnerable and politically powerless When the Bough Breaks is about the world we are creating for our children For too long we have used what we want from our planet now refusing to think about the future But it may still not be too late The book sets out what must be done and describes how people throughout the world are uniting to clean up the mess we have made

Ideology, Social Theory, and the Environment William D. Sunderlin,2003 Does human population growth threaten the environment or does it guarantee we will safeguard it Is economic growth the key ecological problem or is it in fact the solution What will be the leading force to save the planet civil society government or private enterprise This book shows that these polemical debates are governed not so much by access to facts as they are by the political ideology of the expert advancing a particular argument Moreover the thoughts of these experts tend to be based largely in just one of three competing streams of political thought the left the center or the right Drawing on social theory the author explains the philosophical origins of this tendency to rely on just one of three traditions and why this poses a serious obstacle to conceptualizing the cause nature and resolution of environmental problems Sunderlin argues that laying the foundation for a livable world involves giving conscious and dedicated attention to the core tenets of all three political traditions action against class inequality and advocacy of social justice within and among countries reformation of laws and policies emanating from the halls of power and technological innovation in centers of research and wholesale cultural change and promotion of individual initiative responsibility and creativity

Environmental Security Peter Hough,2021-06-29 This textbook offers a student friendly survey of the global politics of the environment through the prism of security studies This book is divided into three thematic sections The first part sets out the key theoretical and practical arguments for and against bringing together environmental and security issues The second part examines why environmental issues have been framed by some as national security concerns in the context of the effects of overpopulation resource depletion climate change and the role of the military as both a cause and a solution to problems of pollution and natural disasters Finally the third section explores the case for treating the key issues of environmental change as matters of human security The chapters have been updated to include the 2015 Paris Climate Change Accords the Trump and Sendai Framework for Disaster Risk Reduction and there is a new chapter on environmental history Overall the book provides a clear systematic and thorough overview of an area of great academic and real world political interest This book will be essential reading for students of environmental studies critical and human security human geography development studies and International Relations in general

The Drama of the Commons National Research Council,Division of Behavioral and Social Sciences and Education,Committee on the Human Dimensions of Global Change,2002-02-15 The tragedy of the commons is a central concept in human ecology and the study of the environment It has had tremendous value for stimulating research but it only describes the reality of human environment

interactions in special situations Research over the past thirty years has helped clarify how human motivations rules governing access to resources the structure of social organizations and the resource systems themselves interact to determine whether or not the many dramas of the commons end happily In this book leaders in the field review the evidence from several disciplines and many lines of research and present a state of the art assessment They summarize lessons learned and identify the major challenges facing any system of governance for resource management They also highlight the major challenges for the next decade making knowledge development more systematic understanding institutions dynamically considering a broader range of resources such as global and technological commons and taking into account the effects of social and historical context This book will be a valuable and accessible introduction to the field for students and a resource for advanced researchers

Diet for a Small Planet Frances Moore Lappé,1991 Encourages making changes in dietary patterns by explaining the ways in which plant protein compares favorably with meats and providing numerous recipes for inexpensive meatless meals

World Hunger Joseph Collins,2014-02-04 The revised edition of this text includes substantial new material on hunger in the aftermath of the Cold War global food production versus population growth changing demographics and falling birth rates around the world the shifting focus of foreign assistance in the new world order structural adjustment and other budget slashing policies trade liberalization and free trade agreements famine and humanitarian interventions and the third worldization of developed nations

Natural Resource Conflicts M. Troy Burnett,2016-09-19 Natural resource and environmental conflicts have long been issues confronting human societies This case based examination of a wide range of natural resource disputes exposes readers to many contemporary examples that offer reasons for both hope and concern The Rwandan genocide the Sudanese civil war and perpetual instability in the Middle East and Africa each of these crises have arguably been instigated and maintained by natural resource disputes China has undertaken a Herculean task to plant hundreds of millions of trees along its margins in an effort to save Beijing from crippling dust storms and halt the expansion of the Gobi desert Will it work and is it worth it These and many other cases of conflict stemming from natural resource or environmental concerns are explained and debated in this up to date examination of contemporary and ongoing topics The book examines conflicts over precious resources and minerals such as diamonds oil water and fisheries as well as the pursuit of lesser known minerals like Coltan and other rare earth elements important resources in our technological age in remote locations such as Greenland and the Congo Each topic contains an overview and two position essays from different authors thereby providing the reader with highly informative and balanced perspectives Reference entries accompany each topic as well helping students to better understand each issue As the world hurtles into the 21st century these natural resource issues are becoming increasingly

important with all global citizens having a significant stake in how these conflicts arise and play out *America Needs Human Rights* Anuradha Mittal, Peter Rosset, 1999 The time has come to stand up for what's right in America We may be in the middle of economic recovery but millions of Americans are not sharing the benefits The growing ranks of those without adequate food jobs shelter or health care challenge our fundamental notions of right and wrong *America Needs Human Rights* makes a powerful case that both the letter and spirit of universally recognized human rights are routinely violated in America by government policies that safeguard profits rather than people Topics includes understanding human rights basic needs and human rights the new American crisis poverty in America welfare reform and human rights policy options and movement building **Fat Cats, High Rollers, and Banksters** C. Foster Stanback, 2013-06-12 The once prosperous American economy where everyone had an ample opportunity to make a decent living has become a big casino The fat cats high rollers and banksters have rigged all the games so that they cash in while everyone else loses their shirts The essays collected in this book provide insights into how the capitalist system works in the present era and how you can navigate it to take control of your personal financial destiny *Communities and the Environment* Arun Agrawal, Clark C. Gibson, 2001 For years environmentalists thought natural resources could be best protected by national legislation But the poor outcomes of this top down policy have led conservation professionals today to regard local communities as the agents of conservation efforts According to a recent survey more than fifty countries report that they pursue partnerships with local communities in an effort to protect their forests Despite the recent popularity of a community based approach the concept of community rarely receives the attention it should get from those concerned with resource management This balanced volume redresses the situation demonstrating both the promise and the potential dangers of community action Although the contributors advocate community based conservation they examine the record with a critical eye They pay attention to the concrete political contexts in which communities emerge and operate Understanding the nature of community requires understanding the internal politics of local regions and their relationship to external forces and actors Especially critical are issues related to ethnicity gender and the state **Coevolutionary Economics: The Economy, Society and the Environment** John Gowdy, 2013-04-18 The subject of this volume is the human economy and its coevolutionary relationship with the natural world This relationship is examined in three broad types of societies hunter gatherers agriculturalists and modern market economies A growing body of scientific evidence has made it clear that the current human impact on the environment is far above the level that can be maintained without causing profound changes in the biophysical world to which we belong The new fields of ecological economics and evolutionary economics can help us understand the relationship between the economy society and the environment and may help us to formulate effective policies to manage these changes **Six Women Who Shaped What Americans Eat** Michelle Mart, 2025-07-15 *Six Women Who Shaped What Americans Eat* tells the story of how food choice in modern America has been influenced by culture industrial abundance and health narratives Mart reflects on

the careers of six women to illustrate the varied and overlapping influences on food choice Each of these women had a substantial impact on American cuisine attitudes toward food and what people chose to eat They highlighted the politics of food the pleasure of food the connection between food and health and the environmental harm of poor food choices Part one of the book discusses the bounties of the modern American food system and covers Hazel Stiebeling Poppy Cannon and Julia Child Stiebeling was a chemist and government nutritionist beginning in the 1930s and shaped dietary guidelines and school lunches that affected generations of Americans Cannon a best selling cookbook author and newspaper columnist gained fame in the 1950s by preaching the wonders of processed food Child another cookbook author and television personality starting in the 1960s celebrated French cuisine and made it accessible to American cooks and palates Part two examines the hidden costs of abundance and covers Frances Moore Lapp Marion Nestle and Alice Waters Lapp was an author and activist concerned with the environmental impact of food in the late 20th century and who is credited with bringing vegetarianism into the mainstream Nestle was an academic nutritionist government consultant and author who decried the undue influence of food corporations Waters a celebrity chef restaurateur and food activist became a symbol of alternative food movements in the 21st century Provided by publisher Managing the Environment John R. Beaumont, BRIAN WHITAKER, LENE PEDERSEN, 2013-10-22 Managing the Environment offers an interdisciplinary and multi functional management approach to the environmental issues affecting business practice Many of the books published on this subject have so far been written by environmental scientists or from a strictly economic viewpoint Managing the Environment aims to redress the balance by considering the impacts of environmental issues on various management functions including accounting and finance marketing production and operations information systems and organizational behaviour and culture Each chapter includes review and study questions and case studies form an important part of the book An up to date and practical text Many examples and cases A multi functional management approach Environments, Natures and Social Theory Damian White, Alan Rudy, Brian Gareau, 2017-09-16 From climate change to fossil fuel dependency from the uneven effects of natural disasters to the loss of biodiversity complex socio environmental problems indicate the urgency for cross disciplinary research into the ways in which the social the natural and the technological are ever more entangled This ground breaking text moves between environmental sociology and environmental geography political and social ecology and critical design studies to provide a definitive mapping of the state of environmental social theory in the age of the anthropocene Environments Natures and Social Theory provokes dialogue and confrontation between critical political economists actor network theorists neo Malthusians and environmental justice advocates It maps out the new environmental politics of hybridity moving from hybrid neo liberals to end times ecologists from post environmentalists to cyborg eco socialists White Rudy and Gareau insist on the necessity of a critical but optimistic hybrid politics arguing that a more just egalitarian democratic and sustainable anthropocene is within our grasp This will only be brought into being however by reclaiming

celebrating and channeling the reconstructive potential of entangled hybrid humans as inventive hominids creative gardeners critical publics and political agents Written in an accessible style *Environments Natures and Social Theory* is an essential resource for undergraduate and postgraduate students across the social sciences
