## **Talking About Aphasia:**

**Talking About Aphasia** Susie Parr, Sally Byng, Sue Gilpin, Chris Ireland, 1997-10-16 This book is a wonderful idea and it meets a heretofore unmet need. It derives from a particularly interesting database since it deals with aphasia in aphasic people's own language. It is strongly recommended. Professor Audrey Holland, Department of Speech Pathology, University of Arizona, USA. This book is about living with aphasia, a language impairment which can result from stroke. Drawing on in-depth interviews with fifty aphasic people, it explores the experience of aphasia from the dramatic onset of stroke and loss of language to the gradual revelation of its long-term consequences. The story is told from the perspective of aphasic people themselves. They describe the impact of aphasia upon their employment, education, leisure activities, finances, personal relationships, and identity. They describe their changing needs and how well these have been met by health, social care, and other services. They talk about what aphasia means to them, the barriers encountered in everyday life, and how they cope. The book offers a unique insight into the struggle of living with aphasia, combining startlingly unusual language with a clear interlinking text.

**Navigating Aphasia** Tessa Ackerman, 2025-07-22 Navigating Aphasia provides the reader with a starting point for working with people with aphasia, presenting key practical points to consider in the clinical management of this client group. With a focus on both the language impairment and the consequences of aphasia, this book is packed with easily accessible applied advice about assessment and therapy from an experienced aphasia clinician. Key sections include Understanding aphasia, Clinical management, Assessment, Approaches to therapy, Language and cognition, Living with aphasia. Concluding with an appendix featuring useful books, websites, and professional organisations, this is an essential practical and comprehensive guide for newly qualified and student speech and language therapists, as well as those new to the world of aphasia.

**Trouble Talking** Daniel R. Boone, 2018-06-07 The ability to speak is an important part of human interaction. In this book, a glimpse into the lived realities of 37 adults and 3 children with communication disorders whose humanism is somewhat compromised by their speech, language, or voice disorders is offered in humorous and heartbreaking detail. The patient's struggle to communicate is often matched by their listeners who are struggling to understand. Stories are presented of patients treated in medical settings for such problems as aphasia, dementia, Parkinson's disease, PD, amyotrophic lateral sclerosis, ALS, and other CNS diseases, apraxia, and head trauma. Other stories look at people who were treated in university clinics for such disorders as cerebral palsy and stuttering. The last few stories look at speech/voice treatment for a transgender woman, the loss of voice in a young man in a state penitentiary, and finally a humorous story of a pilot with left hemiplegia flying the author. Seasoned specialist Daniel Boone does not offer therapy suggestions for either the SLP or the patient's family or friends to try. Rather, for anyone with a communication disorder, he strongly recommends that such patients should seek the guidance and therapy of an ASHA-certified speech-language pathologist (SLP). The SLP determines what to do in therapy and practice. The stories illustrate the struggles of those who cannot always make their listeners

understand They may only be able to repeat the same phrase over and over They may not be able to articulate words clearly enough to be understood They may give bizarre confusing answers to everyday questions Taken together they also illustrate the difficulties listeners those who wish to understand have in trying to make heads or tails of the intended communication Ultimately this work provides a sensitive look at the various disorders people have their attempts to overcome them the treatments that might be available and the actions listeners can take in making communication easier and more productive

*Talking the Talk* Trevor A. Harley, 2025-05-14 Talking the Talk provides a comprehensive introduction to the psychology of language written for the reader with no background in the field or any prior knowledge of psychology Written in an accessible and friendly style the book answers the questions people actually have about language how do we speak listen read and learn language

The book advocates an experimental approach explaining how psychologists can use experiments to build models of language processing. Considering the full breadth of psycholinguistics, the book covers core topics including how children acquire language, how language is related to the brain, and what can go wrong with it. Fully updated throughout this edition, it also includes a new chapter on bilingualism and new coverage of AI and the rise of ChatGPT. Talking the Talk is written in an engaging style that does not hesitate to explain complex concepts. It is essential reading for all undergraduate students and those new to the topic as well as the interested lay reader. Conversation and Brain Damage Charles Goodwin, 2003-01-23

How do people with brain damage communicate? How does the partial or total loss of the ability to speak and use language fluently manifest itself in actual conversation? How are people with brain damage able to expand their cognitive ability through interaction with others, and how do these discursive activities in turn influence cognition? This groundbreaking collection of new articles examines the ways in which aphasia and other neurological deficits lead to language impairments that shape the production, reception, and processing of language. Edited by noted linguistic anthropologist Charles Goodwin and with contributions from a wide range of international scholars, the articles provide a pragmatic and interactive perspective on the types of challenges that face aphasic speakers in any given act of communication. Conversation and Brain Damage will be invaluable to linguists, discourse analysts, linguistic and medical anthropologists, speech therapists, neurologists, psychiatrists, psychologists, workers in mental health care, and in public health, sociologists, and readers interested in the long-term implications of brain damage. **The Teaching of Talking** Mark A. Ittleman, 2020-12-31

In this guide, a speech pathologist teaches readers the methods implemented to improve talking in others so if need be they can do therapy on their own. People with speaking difficulties are at the mercy of insurance companies who are determining how often and for how long speech therapy services should be delivered. It is also a disturbing reality that the likelihood for therapy frequency and length of care is contingent upon either the level of competence or comfort level of the speech language pathologist or the financial policies of each institution. Often it has nothing to do with the severity or need for speech therapy. Our health care system is in no position to bankroll the long-term therapy needed by the many people who have moderate to profound speaking difficulties. The goal of *The Teaching of Talking* is to ensure that any loved one, caregiver, or speech language pathologist is thoroughly knowledgeable in methods to help people improve talking, since it is never known when the plug will be pulled on speech and language therapy services. Ittleman says, "I see hundreds of people with speech and language difficulties each year. By reading and applying *The Teaching of Talking*, you will have the confidence to help your client or loved one no matter what the insurance company or institution does. By learning to do what is in *The Teaching of Talking*, you will be more self-sufficient and will not have to rely on anyone to provide your loved one with expert speech therapy. The methods of home practice with family members will be of great value for patients with aphasia." Daniel R. Boone, PhD, CCC, SLP.
