British Leyland brought together many of Britain's motor manufacturers with the intention of creating a robust unified group that could equal the strength of the big European conglomerates. But this was not to be. There have been many books about the politics and the business activities of British Leyland, but *British Leyland The Cars 1968-1986* looks exclusively at the cars that came from the company, both the models it inherited and those it created. The eighteen years of the corporation's existence saw a confusing multitude of different car types, but this book resolves these confusions, clarifying who built what and when. The book takes 1986 as its cut-off point because this was the year that the old British Leyland ceased to exist and what was left of the car and light commercial business was renamed the Rover Group. The book includes production histories and technical specifications of every major model. The special overseas models, Appendices on engines, code names and factories, buying guidance on the models built in Britain. This is the most comprehensive book so far to focus on the cars from British Leyland between 1968-1986 and it provides an overview of each model's production history together with essential specification details. It is profusely illustrated with 178 colour and 63 b/w photographs *Maximum Mini* Jeroen Booij, 2009 This book focuses solely on the cars derived from the classic Mini: Small GTs, sports cars, roadsters and fun cars, Mini derivatives that changed the specialist motoring market completely in the early sixties and new designs kept it busy for nearly four decades. From the well-known Mini Marcos and Unipower GT that raced at Le Mans to the very obscure but as

exciting Coldwell GT or Sarcon Scarab almost 60 cars are thoroughly researched described and photographed **British Sports Cars Since the War** Martyn Bourne Watkins,1974 Textiles in Automotive Engineering W Fung,J M Hardcastle,2000-11-28 This book presents a comprehensive treatment of both functional and decorative textiles used in the automotive industry including seat covers headliners airbags seat belts and tyres Written in a clear concise style it explains material properties and the way in which they influence manufacturing processes as well as providing practical production details The subject treatment cuts across the disciplines of textile chemistry fabric and plastics technology and production engineering Environmental effects and recycling are also covered It is aimed at the design and process engineer in industry as well as researchers in universities and colleges Quality engineers will also benefit from the book s sections on identifying problems and material limitations *Plastics in the Automotive Industry* J Maxwell,1994-03-31 A survey of the role of plastics materials in the motor industry It discusses progress in the different sectors of automotive engineering and the possible effect of economic and environmental pressures on the growth of the plastics contribution Emphasis is given to materials selection and the author explains how a material can be right or wrong for a particular job and what extraneous factors could change things **Something for the Weekend?** Alwyn Brice,2010-07-21 This book records the buying restoring maintenance and running of 20 interesting unusual rare or eccentric cars that the author has owned in the last 25 years Each car has been a love affair in its own right and in consequence like true love they have not always run smoothly
