Narayanan,1987-07-09 The constant need for cost effective structural forms has led to the increasing use of composite construction and a substantial amount of research effort is currently being spent in developing techniques for combining concrete and steel effectively Significant economies in this form of construction have been observed especially in bridges and building floors Codes of Practice on composite construction are being revised in the UK and in Europe in the light of the substantial amount of knowledge that has been generated in recent years An International Conference organised by the Department of Civil and Structural Engineering University College Cardiff UK with the specific objective of discussing all types of metal structures in an integrated way provided a forum for the dissemination of new concepts and for reviewing developments the expectations of the organisers have been amply justified and exceeded by the level of international response to the call for papers This volume contains 17 papers on composite steel structures presented at the Conference many of which were by well known experts in their respective fields *High Performance Structures and Materials VI* Willy Patrick Wilde,C. A. Brebbia,Santiago Hernández,2012 Containing the edited papers presented at the Sixth International Conference on High Performance Structures and Materials High Performance Structures and Materials VI addresses the issues involved with advanced types of structures particularly those based on new concepts or new materials Contributions will highlight the latest developments in design optimisation manufacturing and experimentation in these areas The use of novel materials and new structural concepts nowadays is not restricted to highly

technical areas like aerospace aeronautical applications or the automotive industry but affects all engineering fields including those such as civil engineering and architecture Most high performance structures require the development of a generation of new materials which can more easily resist a range of external stimuli or react in a non conventional manner The book will cover such topics as Composite materials and structures Lightweight structures Nanocomposites High performance concretes Concrete fibres Automotive composites Steel structures Natural fibre composites Timber structures Material characterisation Experiments and numerical analysis Damage and fracture mechanics Computational intelligence Adaptable and mobile structures Environmentally friendly structures □□□□□□□□□□ ,2006 22 **Composite**
