

7. Conclusion

Cellular operators today are making significant investments to build and support their networks. In order to increase profitability, operators are expecting and demanding that the network equipment they purchase perform with a high level of availability. Operators are also pursuing ways to minimize the cost of running their networks.

The invention of the MTL (NS7) link utilization formulas address not only the operator concern for high system availability but also the desire to maintain reasonable operating costs. The formulas make obsolete the current way of obtaining link utilization data via analyzer equipment. Many of the benefits, both in terms of improving system availability and reducing costs, were enumerated.

It is important to note that the benefits of implementing the MTL (NS7) link utilization formulas is not limited to the Motorola GSM product offering. The same formulas can be applied to any network supporting NS7/CL7/PT links.

8. Acknowledgments

The author would like to thank Tawfik Ahmed, David Mann, Gavin Simpson, and Simon Strouth for their aid in the derivation of the MTL link utilization formulas.
