Spectroscopy Molecular Structure:

Spectroscopy and Molecular Structure Gerald W. King, 1969 *Spectroscopy And Molecular Structure* Gernald W. King, 1972 Molecular Structure and Spectroscopy Section on Physical Chemistry (INTERNATIONAL UNION OF PURE AND APPLIED CHEMISTRY). Commission on Molecular Structure and Spectroscopy, 1963 **The Spectra and Structures of Simple Free Radicals** Gerhard Herzberg, 1988-01-01 Authoritative and clearly written Applied Optics The direct observation of short lived free radicals and the consequent study of their structure and reactions have led to important developments in almost every branch of chemistry as well as in other areas This volume by a Nobel laureate offers an excellent introduction to the essentials of molecular spectroscopy The introductory chapter discusses experimental methods and illustrates the observed spectra of various molecules and free radicals Subsequent chapters explore rotational vibrational and electronic energy levels of diatomic molecules and ions radiative transitions linear and nonlinear polyatomic radicals and ions continuous and diffuse spectra predissociation and pre ionization and recombination The well illustrated text features more than 100 figures and spectra A distilled version of the author s monumental three volume study Molecular Spectra and Molecular Structure it constitutes a superb resource for anyone wishing a concise but complete treatment of the fundamentals of molecular spectroscopy **Infra-red Spectroscopy and Molecular Structure** Mansel Davies, 1963

Equilibrium Molecular Structures Jean Demaison, James E. Boggs, Attila G. Csaszar, 2016-04-19 Molecular structure is the most basic information about a substance determining most of its properties Determination of accurate structures is hampered in that every method applies its own definition of structure and thus results from different sources can yield significantly different results Sophisticated protocols exist to account for these **Introductory Group Theory** John R. Ferraro, Joseph S. Zimek, 2013-11-09 This volume is a consequence of a series of seminars presented by the authors at the Infrared Spectroscopy Institute Canisius College Buffalo New York over the last nine years Many participants on an intermediate level lacked a sufficient background in mathematics and quantum mechanics and it became evident that a non mathematical or nearly nonmathematical approach would be necessary The lectures were designed to fill this need and proved very successful As a result of the interest that was developed in this approach it was decided to write this book The text is intended for scientists and students with only limited theoretical background in spectroscopy but who are sincerely interested in the interpretation of molecular spectra The book develops the detailed selection rules for fundamentals combinations and overtones for molecules in several point groups Detailed procedures used in carrying out the normal coordinate treatment for several molecules are also presented Numerous examples from the literature illustrate the use of group theory in the interpretation of molecular spectra and in the determination of molecular structure *Nonlinear Spectroscopy for Molecular Structure Determination* Robert W. Field, 1998 A large variety of nonlinear spectroscopic methods have so far been developed and applied to studies of molecular structure and dynamics Some of these methods

utilize complex techniques making it difficult to understand the underlying principles Furthermore most of these methods are referred to by nicknames or acronyms which keeps them shrouded in mystery for most non specialists who are thereby discouraged from mastering and applying the methods to molecular systems Under these circumstances it was judged appropriate and timely to overview those nonlinear spectroscopic methods which are currently particularly useful for studies of molecular structure and dynamics Thus the Commission on Molecular Structure and Spectroscopy of the International Union of Pure and Applied Chemistry decided to publish a book intended to provide an introduction to nonlinear spectroscopy for non specialists

Molecular Spectra and Molecular Structure: Spectra of diatomic molecules
Gerhard Herzberg, 1950 **Atomic And Molecular Spectroscopy** Mool Chand Gupta, 2007 This Comprehensive Text Clearly Explains Quantum Theory Wave Mechanics Structure Of Atoms And Molecules And Spectroscopy The Book Is In Three Parts Namely Wave Mechanics Structure Of Atoms And Molecules And Spectroscopy And Resonance Techniques In A Simple And Systematic Manner The Book Explains The Quantum Mechanical Approach To Structure Along With The Basic Principles And Application Of Spectroscopic Methods For Molecular Structure Determination The Book Also Incorporates The Electric And Magnetic Properties Of Matter The Symmetry Group Theory And Its Applications Each Chapter Includes Many Solved Examples And Problems For A Better Understanding Of The Subject With Its Exhaustive Coverage And Systematic Approach This Is An Invaluable Text For B Sc Hons And M Sc Chemistry Students

Molecular Spectra and Molecular Structure - Vol I Gerhard Herzberg, 2013-04-18 I have endeavoured to give a presentation which is readable by the beginner in the field and also will be useful to those who do or want to do research work in this field In order to assist the former I have frequently made use of small type for those sections that are not necessary for an understanding of the fundamentals For the benefit of those working in the field numerous references to original papers have been included A satisfactory presentation of molecular spectra and molecular structure is nowadays not possible without treating thoroughly apart from the empirical results the theoretical background also Therefore I have included as much of the theory of molecular spectra as is possible without going into the more difficult mathematical details A large number of diagrams graphical representations of eigenfunctions and potential curves as well as energy level diagrams serve to illustrate and to explain the theory On the other hand I have added numerous carefully selected spectrograms of bands and band systems some of which have been taken specially for this purpose in order to give an accurate idea of the experimental material that forms the basis of the developments
