### **Tables of Characteristic Functions for Solving Boundary-value Problems of the Wave Equation with**

**Application to Supersonic Interference** Jack Norman Nielsen, 1957 Tables are presented containing 69 000 values of a set of characteristic functions which first arose in problems of supersonic wing body interference The tables are useful in problems of supersonic flow involving aerodynamic shapes which are wholly or in part quasi cylinders of nearly circular cross section A number of uses are described in the aerodynamics of bodies alone body body or shock body interference wing body interference the vortex panel interference Three illustrative examples are worked out in detail First the pressure field due to fuselage indentation is calculated and presented in a form independent of Mach number Secondly the tables are applied to a problem involving a previously unpublished solution to the Navier Stokes equations namely the boundary layer profiles of a circular cylinder moved impulsively with a constant axial force in a viscous incompressible fluid In the final example the wave drag of corrugated circular cylinders is calculated as a function of the number of corrugations and their wave length Several nonaerodynamic applications are pointed out in the fields of acoustics and heat conduction Generally speaking the tables are applicable to boundary value problems of the second kind involving the wave equation in three dimensions with approximately circular cylindrical boundaries or involving the unsteady heat conduction equation in two space dimensions with nearly circular boundaries

Structure of Atomic Nuclei L. Satpathy, 1999 This volume is an outcome or a SERC School on the nuclear physics on the theme Nuclear Structure The topics covered are nuclear many body theory and effective interaction collective model and microscopic aspects of nuclear structure with emphasis on details of technique and methodology by a group of working nuclear physicists who have adequate expertise through decades of experience and are generally well known in their respective fields This book will be quite useful to the beginners as well as to the specialists in the field of nuclear structure physics

**Theoretical Geophysical Fluid Dynamics** Monin, 2012-12-06 This book grew out of lectures on geophysical fluid dynamics delivered over many years at the Moscow Institute of Physics and Technology by the author and with regard to some parts of the book by his colleagues During these lectures the students were advised to read many books and sometimes individual articles in order to acquaint themselves with the necessary material since there was no single book available which provided a sufficiently complete and systematic account except perhaps the volumes on Hydrophysics of the Ocean Hydrodynamics of the Ocean and Geodynamics in the ten volume Oceanology series published by Nauka Press in 1978 1979 these refer however specifically to the ocean and anyway they are much too massive to be convenient for study by students As far as we know no text corresponding to our understanding of geophysical fluid dynamics has as yet been

published outside the Soviet Union The present book is designed to fill this gap Since it is customary to write the preface after the entire book has been completed the author has an opportunity there to raise some points of possible criticism by the reviewers and readers First of all note that this work presents the theoretical fundamentals of geophysical fluid dynamics and that observational and experimental data which in the natural sciences are always very copious are referred to only rarely and briefly

Magnetism in Topological Insulators Vladimir Litvinov, 2019-05-07 This book serves as a brief introduction to topological insulator physics and device applications Particular attention is paid to the indirect exchange interaction mediated by near surface Dirac fermions and the spin texture this interaction favors Along with useful information on semiconductor material systems the book provides a theoretical background for most common concepts of TI physics Readers will benefit from up to date information and methods needed to start working in TI physics theory experiment and device applications Discusses inter spin interaction via massless and massive Dirac excitations Includes coverage of near surface spin texture of the magnetic atoms as related to their mutual positions as well to their positions with respect to top and bottom surfaces in thin TI film Describes non RKKY oscillating inter spin interaction as a signature of the topological state Explains the origin of the giant Rashba interaction at quantum phase transition in TI conventional semiconductors

Wide Bandgap Semiconductor Spintronics Vladimir Litvinov, 2024-04-26 This second edition of the book presents spintronic properties of III V nitride semiconductors As wide bandgap III nitride nanostructures are relatively new materials the book pays particular attention to the difference between zinc blende GaAs and wurtzite GaN based structures where the Rashba spin orbit interaction plays a crucial role in voltage controlled spin engineering It also deals with topological insulators and discusses electrically driven zero magnetic field spin splitting of surface electrons with respect to the specifics of electron localized spin interaction and voltage controlled ferromagnetism It describes the recently identified zero gap state an anomalous quantum semimetal The book comprises calculation of topological indexes in semiconductor and semimetal phases It compares results that follow from the low energy model and the Bernevig Huges Zhang model which accounts for the full Brillouin zone electron spectrum It also discusses the fractional quantization of Hall conductance and

performs the direct calculation of Chern numbers for the inverted GaN InN quantum well determining topological properties by Chern number  $C_2$ . The book explores and actively discusses semiconductor spintronics and proposes various device implementations along the way. Although writings on this topic appear in the current literature, this book is focused on the materials science side of the question, providing a theoretical background for the most common concepts of spin electron physics. It covers generic topics in spintronics without entering into device specifics, since its aim is to give instructions to be used in solving problems of a general and specific nature. It is intended for graduate students and will serve as an introductory course in this specific field of solid state theory and applications.

The Marcel Grossmann Meetings are three yearly forums that meet to discuss recent advances in gravitation, general relativity, and relativistic field theories, emphasizing their mathematical foundations, physical predictions, and experimental tests. These meetings aim to facilitate the exchange of ideas among scientists to deepen our understanding of space-time structures and to review the status of ongoing experiments and observations testing Einstein's theory of gravitation, either from ground or space-based experiments. Since the first meeting in 1975 in Trieste, Italy, which was established by Remo Ruffini and Abdus Salam, the range of topics presented at these meetings has gradually widened to accommodate issues of major scientific interest, and attendance has grown to attract more than 900 participants from over 80 countries. This proceedings volume of the eleventh meeting in the series, held in Berlin in 2006, highlights and records the developments and applications of Einstein's theory in diverse areas ranging from fundamental field theories to particle physics, astrophysics, and cosmology, made possible by unprecedented technological developments in experimental and observational techniques from space, ground, and underground observatories. It provides a broad sampling of the current work in the field, especially relativistic astrophysics, including many reviews by leading figures in the research community.

AI in the earlier conferences: Tokyo 1986, Atlanta 1988, Melbourne 1991, and Hong Kong 1992, the response to the call for presentations at ICES 95 in Hawaii has been overwhelming. A very careful screening of the extended abstracts resulted in about 500 papers being accepted for presentation. Out of these written versions, about 480 papers reached the conference secretariat in Atlanta in time for inclusion in these proceedings. The topics covered at ICES 95 range over the broadest spectrum of computational engineering science. The editors thank the international scientific committee for their advice and encouragement in making ICES 95 a successful scientific event. Special thanks are expressed to the International Association for Boundary Elements Methods for hosting IABEM 95 in conjunction with ICES 95. The editors here express their deepest

gratitude to Ms Stacy Morgan for her careful handling of a myriad of details of ICES 95 often times under severe time constraints The editors hope that the readers of this proceedings will find a kaleidoscopic view of computational engineering in the year 1995 as practiced in various parts of the world Satya N Atluri Atlanta Georgia USA Genki Yagawa Tokyo Japan Thomas A Cruse Nashville TN USA Organizing Committee Professor Genki Yagawa University of Tokyo Japan Chair Professor Satya Atluri Georgia Institute of Technology U S A     Particle Characterization in Technology J.K.
