**Journal of Rehabilitation Research and Development**, 1992

An Introduction to Artificial Intelligence in Education Shengquan Yu, Yu Lu, 2021-11-29

This book systematically reviews a broad range of cases in education that utilize cutting edge AI technologies. Furthermore, it introduces readers to the latest findings on the scope of AI in education so as to inspire researchers from non-technological fields e.g. education, psychology and neuroscience to solve education problems using the latest AI techniques. It also showcases a number of established AI systems and products that have been employed for education. Lastly, the book discusses how AI can offer an enabling technology for critical aspects of education, typically including the learner, content, strategy, tools and environment, and what breakthroughs and advances the future holds. The book provides an essential resource for researchers, students and industrial practitioners interested and engaged in the fields of AI and education. It also offers a convenient handbook for non-professional readers who need a primer on AI in education and who want to gain a deeper understanding of emerging trends in this domain.

**Access to Learning for Pupils with Disabilities** John Cornwall, 2013-10-28

*Information Access and Adaptive Technology* Carmela Cunningham, Norman Coombs, 1997

Today, colleges and universities are ethically and legally bound to make their computing facilities and information technology centers more accessible to persons with disabilities. *Information Access and Adaptive Technology* provides information to help meet this responsibility efficiently and successfully.

**Designing for Humans** Jan Noyes, 2002-09-26

Nature aside, the world in which we live should be designed for us. From everyday products like scissors and chairs to complex systems in avionics, medicine and nuclear power applications, now more than ever, technological advances continue to increase the range and complexity of tasks that people have to perform. As a discipline, human factors psychology/ergonomics therefore has an increasingly important role to play in ensuring that the human user's physical characteristics, cognitive abilities and social needs are taken into account in the development, implementation and operation of products and systems. In this book, Jan Noyes provides a comprehensive and up-to-date overview of human-machine interaction and the design of environments at work. Focusing on topics relevant to user-centred design, she includes coverage of the capabilities and limitations of humans, human-machine interactions, work environments and organizational issues. Health and safety issues underpin a large amount of work on the human factors of design, and these are addressed fully throughout the book. Each chapter includes case studies that demonstrate the real-world relevance of the points being made and concludes with a list of key points. Although aimed

primarily at advanced undergraduates postgraduates and researchers in organizational and occupational psychology this book will also be of relevance to students on engineering computing and applied psychology human factors programmes
