Introduction to Audio Processing

Mads G. Christensen, 2019-03-30 This textbook presents an introduction to signal processing for audio applications The author s approach posits that math is at the heart of audio processing and that it should not be simplified He thus retains math as the core of signal processing and includes concepts of difference equations convolution and the Fourier Transform Each of these is presented in a context where they make sense to the student and can readily be applied to build artifacts Each chapter in the book builds on the previous ones building a linear coherent story The book starts with a definition of sound and goes on to discuss digital audio signals filters The Fourier Transform audio effects spatial effects audio equalizers dynamic range control and pitch estimation The exercises in each chapter cover the application of the concepts to audio signals The exercises are made specifically for Pure Data Pd although traditional software such as MATLAB can be used The book is intended for students in media technology bachelor programs The book is based on material the author developed teaching on the topic over a number of years

Audio and Speech Processing with MATLAB

Paul Hill, 2018-12-07

Speech and audio processing has undergone a revolution in preceding decades that has accelerated in the last few years generating game changing technologies such as truly successful speech recognition systems a goal that had remained out of reach until very recently This book gives the reader a comprehensive overview of such contemporary speech and audio processing techniques with an emphasis on practical implementations and illustrations using MATLAB code Core concepts are firstly covered giving an introduction to the physics of audio and vibration together with their representations using complex numbers Z transforms and frequency analysis transforms such as the FFT Later chapters give a description of the human auditory system and the fundamentals of psychoacoustics Insights results and analyses given in these chapters are subsequently used as the basis of understanding of the middle section of the book covering wideband audio compression MP3 audio etc speech recognition and speech coding The final chapter covers musical synthesis and applications describing

methods such as and giving MATLAB examples of AM FM and ring modulation techniques This chapter gives a final example of the use of time frequency modification to implement a so called phase vocoder for time stretching in MATLAB Features A comprehensive overview of contemporary speech and audio processing techniques from perceptual and physical acoustic models to a thorough background in relevant digital signal processing techniques together with an exploration of speech and audio applications A carefully paced progression of complexity of the described methods building in many cases from first principles Speech and wideband audio coding together with a description of associated standardised codecs e g MP3 AAC and GSM Speech recognition Feature extraction e g MFCC features Hidden Markov Models HMMs and deep learning techniques such as Long Short Time Memory LSTM methods Book and computer based problems at the end of each chapter Contains numerous real world examples backed up by many MATLAB functions and code

Audio Processing and Speech Recognition Soumya Sen, Anjan Dutta, Nilanjan Dey, 2019-01-30 This book offers an overview of audio processing including the latest advances in the methodologies used in audio processing and speech recognition First it discusses the importance of audio indexing and classical information retrieval problem and presents two major indexing techniques namely Large Vocabulary Continuous Speech Recognition LVCSR and Phonetic Search It then offers brief insights into the human speech production system and its modeling which are required to produce artificial speech It also discusses various components of an automatic speech recognition ASR system Describing the chronological developments in ASR systems and briefly examining the statistical models used in ASR as well as the related mathematical deductions the book summarizes a number of state of the art classification techniques and their application in audio speech classification By providing insights into various aspects of audio speech processing and speech recognition this book appeals a wide audience from researchers and postgraduate students to those new to the field

Advances in Audio and Speech Signal Processing Hector Perez-Meana, 2007 This book provides a comprehensive approach of signal processing tools regarding the enhancement recognition and protection of speech and audio signals It offers researchers and practitioners the information they need to develop and implement efficient signal processing algorithms in the enhancement field Provided by publisher

Introduction to Digital Speech Processing Lawrence R. Rabiner, Ronald W. Schafer, 2007 Provides the reader with a practical introduction to the wide range of important concepts that comprise the field of digital speech processing Students of speech research and researchers working in the field can use this as a reference guide

Speech and Audio Processing in Adverse Environments Eberhard Hänsler, Gerhard Schmidt, 2010-11-25 Users of signal processing systems are never satisfied with the system they currently use They are constantly asking for higher quality faster performance more comfort and lower prices Researchers and developers should be appreciative for this attitude It justifies their constant effort for improved systems Better knowledge about biological and physical interrelations coming along with more powerful technologies are their engines on the endless road to perfect systems This book is an impressive image of this process After Acoustic Echo 1 and

Noise Control published in 2004 many new results lead to Topics in 2 Acoustic Echo and Noise Control edited in 2006 Today in 2008 even more new findings and systems could be collected in this book Comparing the contributions in both edited volumes progress in knowledge and technology becomes clearly visible Blind methods and multi-input systems replace the low complexity systems The functionality of new systems is less and less limited by the processing power available under economic constraints The editors have to thank all the authors for their contributions They cooperated readily in our effort to unify the layout of the chapters the terminology and the symbols used It was a pleasure to work with all of them Furthermore it is the editors concern to thank Christoph Baumann and the Springer Publishing Company for the encouragement and help in publishing this book
