Speech Recognition Over Digital Channels:

Speech Recognition Over Digital Channels Antonio Peinado, Jose Segura, 2006-08-04 Automatic speech recognition ASR is a very attractive means for human machine interaction The degree of maturity reached by speech recognition technologies during recent years allows the development of applications that use them In particular ASR shows an enormous potential in mobile environments where devices such as mobile phones or PDAs are used and for Internet Protocol IP applications Speech Recognition Over Digital Channels is the first book of its kind to offer a complete system comprehension addressing the topics of distributed and network based speech recognition issues and standards the concepts of speech processing and transmission and system architectures and robustness Describes the different client server architectures for remote speech recognition systems by means of which the client transmits speech parameters through a digital channel to a remote recognition server Focuses on robustness against both adverse acoustic environments in the front end and bit errors packet loss Discusses four ETSI standards for distributed speech recognition the understanding of the standards and the technologies behind them Provides the necessary background for the comprehension of remote speech recognition technologies This book will appeal to a wide ranging audience engineers using speech recognition systems researchers involved in ASR systems and those interested in processing and transmitting speech such as signal processing and communications communities It will also be of interest to technical experts requiring an understanding of recognition over mobile and IP networks and postgraduate students working on robust speech processing **Automatic Speech**

Recognition on Mobile Devices and over Communication Networks Zheng-Hua Tan, Boerge Lindberg, 2008-04-17 The advances in computing and networking have sparked an enormous interest in deploying automatic speech recognition on mobile devices and over communication networks This book brings together academic researchers and industrial practitioners to address the issues in this emerging realm and presents the reader with a comprehensive introduction to the subject of speech recognition in devices and networks It covers network distributed and embedded speech recognition systems Speech Processing in Mobile Environments K. Sreenivasa Rao, Anil Kumar Vuppala, 2014-01-28 This book focuses

on speech processing in the presence of low bit rate coding and varying background environments The methods presented in the book exploit the speech events which are robust in noisy environments Accurate estimation of these crucial events will be useful for carrying out various speech tasks such as speech recognition speaker recognition and speech rate modification in mobile environments The authors provide insights into designing and developing robust methods to process the speech in mobile environments Covering temporal and spectral enhancement methods to minimize the effect of noise and examining methods and models on speech and speaker recognition applications in mobile environments **Speech Technologies** Ivo Ipsic, 2011-06-13 This book addresses different aspects of the research field and a wide range of topics in speech signal processing speech recognition and language processing The chapters are divided in three different sections Speech Signal

Modeling Speech Recognition and Applications The chapters in the first section cover some essential topics in speech signal processing used for building speech recognition as well as for speech synthesis systems speech feature enhancement speech feature vector dimensionality reduction segmentation of speech frames into phonetic segments The chapters of the second part cover speech recognition methods and techniques used to read speech from various speech databases and broadcast news recognition for English and non English languages The third section of the book presents various speech technology applications used for body conducted speech recognition hearing impairment multimodal interfaces and facial expression recognition

Robust Speech Recognition of Uncertain or Missing Data Dorothea Kolossa, Reinhold

Haeb-Umbach, 2011-07-14 Automatic speech recognition suffers from a lack of robustness with respect to noise reverberation and interfering speech The growing field of speech recognition in the presence of missing or uncertain input data seeks to ameliorate those problems by using not only a preprocessed speech signal but also an estimate of its reliability to selectively focus on those segments and features that are most reliable for recognition This book presents the state of the art in recognition in the presence of uncertainty offering examples that utilize uncertainty information for noise robustness reverberation robustness simultaneous recognition of multiple speech signals and audiovisual speech recognition The book is appropriate for scientists and researchers in the field of speech recognition who will find an overview of the state of the art in robust speech recognition professionals working in speech recognition who will find strategies for improving recognition results in various conditions of mismatch and lecturers of advanced courses on speech processing or speech recognition who will find a reference and a comprehensive introduction to the field The book assumes an understanding of the fundamentals of speech recognition using Hidden Markov Models

Speech Recognition France Mihelič, Janez Zibert, 2008-11-01

Chapters in the first part of the book cover all the essential speech processing techniques for building robust automatic speech recognition systems the representation for speech signals and the methods for speech features extraction acoustic and language modeling efficient algorithms for searching the hypothesis space and multimodal approaches to speech recognition The last part of the book is devoted to other speech processing applications that can use the information from automatic speech recognition for speaker identification and tracking for prosody modeling in emotion detection systems and in other speech processing applications that are able to operate in real world environments like mobile communication services and smart homes
