Verma,Xiu-Peng Song,Munna Singh,Jian-Ming Wu,Yang-Rui Li,2024-12-06 This new book focuses on the core aspects of sugarcane biotechnological transformation and advanced approaches for augmenting plant development and production through intrinsic extrinsic variations It presents comprehensive and updated information on sugarcane crop management in response to adverse climatic variables for sustainable production discussing innovative interventions for how sugarcane copes with environmental stresses and the role of biochar on sugarcane crop improvement at different growth periods during stress Management of abiotic stresses in sugarcane through conventional and molecular approaches is also covered as are developments in biotechnological approaches and their impact on sugarcane output Various techniques used in different countries for improving sugarcane output handling pests and improvement of harvest quality are also reviewed Different approaches that support improvement of sugarcane as a renewable source of bioenergy are discussed as well *Agronomic Crops* Mirza Hasanuzzaman,2020-03-09 Agronomic crops have been a source of foods beverages fodders fuels medicines and industrial raw materials since the dawn of human civilization Over time these crops have come to be cultivated using scientific methods instead of traditional methods However in the era of climate change agronomic crops are increasingly subjected to various environmental stresses which results in substantial yield loss To meet the food demands of the ever increasing global population new technologies and management practices are being adopted to boost yield and maintain productivity under both normal and adverse conditions To promote the sustainable production of agronomic crops scientists are currently exploring a range of approaches which include varietal development soil management nutrient and water management pest management etc Researchers have also made remarkable progress in developing stress tolerance in crops through various approaches However finding solutions to meet the growing food demands remains a challenge Although there are several research publications on the above mentioned problems there are virtually no comprehensive books addressing all of the recent topics Accordingly this book which covers all aspects of production technologies management practices and stress tolerance of agronomic crops in a single source offers a highly topical guide **Salt in Eastern North America and the Caribbean** Ashley A. Dumas,Paul N. Eubanks,2021-02-09 Case studies examining the archaeological record of an overlooked mineral Salt once a highly prized trade commodity essential for human survival is often overlooked in research because it is invisible in the archaeological record Salt in Eastern North America and the Caribbean History and Archaeology brings salt back into archaeology showing that it was valued as a dietary additive had curative powers and was a substance of political

power and religious significance for Native Americans Major salines were embedded in collective memories and oral traditions for thousands of years as places where physical and spiritual needs could be met Ethnohistoric documents for many Indian cultures describe the uses of and taboos and other beliefs about salt The volume is organized into two parts Salt Histories and Salt in Society Case studies from prehistory to post Contact and from New York to Jamaica address what techniques were used to make salt who was responsible for producing it how it was used the impact it had on settlement patterns and sociopolitical complexity and how economies of salt changed after European contact Noted salt archaeologist Heather McKillop provides commentary to conclude the volume

Agro-industrial Perspectives on Sugarcane Production under Environmental Stress Krishan K. Verma, Xiu-Peng Song, Vishnu D. Rajput, Sushil Solomon, Yang-Rui Li, Govind P. Rao, 2023-01-01. This edited volume focuses on the core aspects of sugarcane production management under stressful environments as well as innovative strategies for augmenting crop growth productivity through intrinsic and extrinsic manipulations. The various chapters aim at bringing out comprehensive and advance information on different aspects of sugarcane cultivation under stress environments and impact of climate change on the sustainability of sugarcane production. The book encompasses information about crop production management physiological nutritional requirements ratooning ripening and post harvest losses management. It also delineates various technologies that support the continued use and improvement of sugarcane as renewable source of food fiber and bio energy. The manipulations at cellular and molecular levels molecular breeding approaches and post harvest technologies are also included. The area under sugarcane cultivation is gradually increasing because of its diversification potential. The high productivity and biomass of the cane crop also makes it a key source for use as bio energy crop and a promising raw material for bio based agro industries. However poor crop biomass productivity due to abiotic stress is the foremost constraint in its future commercial exploitation as sustainable feed stock for bio based industries. It is therefore imperative to understand the cellular molecular modulation responsible to productivity barrier under specific stress situations for better sugarcane quality and quantum under field condition. Some of these innovative approaches are delineated in this book. This book is of interest to progressive sugarcane growers millers industrial entrepreneurs sugarcane scientists cane development and extension officers sugar industry managers and valuable source of reference worldwide.

A review of management strategies for salt-prone land and water resources in Iran Asad Sarwar Qureshi, Manzoor Qadir, Nader Heydari, Hugh Turrall, Arzhang Javadi, 2007-11-16. Approximately half of the irrigated area of Iran falls under different types of salt affected soils and average

yield losses may be as high as 50 percent Slightly and moderately salt affected soils are mostly found on the piedmonts at the foot of the Elburz Alborz Mountains in the northern part of the country The soils having severe to extreme salinity are predominantly located in the Central Plateau the Khuzestan and Southern Coastal Plains and the Caspian Coastal Plain The process of salinization of the surface water resources is mainly due to natural conditions and to a lesser extent to the discharge of drainage water into the river systems Estimates show that about 6 7 km³ of brackish water flow annually through 12 major rivers There is no straightforward solution to the complex problems of salt induced soil and water resources degradation in Iran The approaches addressing the management of these resources need to be multidimensional and must take into account biophysical and environmental conditions of the target areas as well as livelihood aspects of the associated communities

Crop Production in Salt Affected Soils I.C. Gupta,S.K. Gupta,2019-04-01 The course work for various degree programs are constantly revised and or new courses added so that the future teachers researches and planners are able to face the new emerging challenges The environmental concerns of irrigated agriculture in the form of water logging and soil salinity are expanding and impacting food grains production These challenges are commonly articulated at various forums Thus reclamation management and crop production practices of waterlogged salt affected soils have been introduced as a subject in agricultural and agricultural engineering colleges Since there is a general lack of a good textbook on this subject authors have attempted to fill this gap through the current publication titled Crop Production in Salt Affected Soils It comprehensively deals with the fundamentals of land reclamation principles and crop production practices It has been divided into 16 Chapters The book begins with general introduction comprising of categorization of salt affected soils extent and distribution and nature and physical chemical and biological properties Other chapters includes basic information on on farm land development hydrology irrigation practices drainage methods leaching soil salinization chemical amendments and new innovative techniques including agronomic and cultural practices related to land reclamation Crop production practices for select cereal oil seeds sugar fiber and forage green manure crops grasses and forest plantations are also included Chapter sixteen covers the economic evaluation and social issues involved in land reclamation programs A Glossary of terms has been added for quick overview of the terms used in the book The textbook designed and developed for the undergraduate post graduate students of agricultural agricultural engineering has been profusely illustrated so that students are able to visualize the processes and phenomena being dealt with Besides serving as a text book it will prove to be a handy resource book to conduct specialized training programs on land reclamation We believe that the book will find its due place in the shelves of students and teachers field functionaries and college libraries of state agricultural universities and civil engineering colleges
