### **Trends in Human Hair Growth and Alopecia Research**

Dominique van Neste,J.M. Lachapelle,J.L. Antoine,2012-12-06 It is now thirty years since William Montagna and Richard Ellis edited The Biology of Hair Growth In his introduction Stephen Rothman of the University of Chicago USA and one of the

driving forces behind research on skin at the time wrote The pilary system is a perfect microcosmic structure In this microcosmos we find birth development ageing and death activity and rest color formation and decolorification greasiness and dryness infection and sterilization hypertrophy and atrophy Benign tumours and malignant ones He foresaw the human pilary system as a model for the study of a multitude of human diseases including ageing and cancer It was not however until the seventies that the development of micro biochemical techniques indeed allowed the use of the human hair follicle as a convenient biopsy tissue for Biomedical Research in general Measurement of enzyme activities and important cofactors and culturing of cells from single follicles all became possible In the eighties dermal papilla cells were grown in culture and this opened the way to study hair differentiation in vitro Studying hair differentiation is in fact studying growth regulation and it is this aspect that by far transcends the importance of studying hair growth itself Let us not forget that metastatic prostate cancer is treated with the same drug cyproterone acetate that is used for the treatment of alopecia and hirsutism in women
