**Pyrometry** Alexander Villenovich Frunze,2025-07-23 This book is devoted to the ways of further development of pyrometry A  
feature of pyrometry is that pyrometers are always calibrated by BB blackbody but the radiation spectrum of real objects  
differs from the radiation spectrum of BB Therefore a perfectly calibrated pyrometer will accurately measure the  
temperature of BB but it will measure the temperature of a real object emitting differently from BB with an error The more  
the intensity and spectrum of radiation of the measured object and BB differ the greater this error Therefore pyrometer  
measurements always require correction The author proposes original correction methods that take into account both the  
radiation spectrum of the object and its dependence on the temperature of the object It is shown that increasing the accuracy  
of measurements is impossible without instruments for measuring the temperature spectral emissivity of objects and that the  
creation of instruments for such measurements is already possible The analysis of metrological problems of pyrometry is  
carried out and ways of their solution are given     **Two Thieves and a Puma** John Henry Reese,1980 Private investigator
