Sundials An Illustrated History Of Portable Dials:

Sundials Hester Higton, 2001 This is an examination of the portable sundials used as timekeepers for three millennia The focus is on the sundials themselves but much reference is made to social political and economic history The Prosciutto Sundial Christopher Charles Parslow, Robert Rich Professor of Latin Christopher Parslow, 2024 The Prosciutto Sundial is the first comprehensive study of the sundial in the shape of a miniature prosciutto from the Villa dei Papiri in Herculaneum from its rediscovery in 1755 to modern times Drawing on contemporary correspondence and manuscripts early philological and scientific assessments and later published accounts it catalogs the many attempts by scholars and lay people alike to understand how it functioned It explains the significance of its context in the Villa and through the results of empirical analysis using a 3D model highlights the remarkable accuracy of this unique ancient timepiece *Monks, Manuscripts and Sundials* Catherine Eagleton, 2010 Bringing together the surviving material and manuscript evidence this book looks closely at a fascinating medieval sundial in the form of a ship It considers who made and used the surviving instruments as well as studying the scholars who wrote about it *In Synchrony with the Heavens, Volume 2 Instruments of Mass Calculation* David King, 2005-06-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices

Analemmatic Sundial Sourcebook Frederick W. Sawyer, 2004 **Islamic Astronomy and Geography** David A. King, 2022-02-13 This volume of 12 studies mainly published during the past 15 years begins with an overview of the Islamic astronomy covering not only sophisticated mathematical astronomy and instrumentation but also simple folk astronomy and the ways in which astronomy was used in the service of religion It continues with discussions of the importance of Islamic instruments and scientific manuscript illustrations Three studies deal with the regional schools that developed in Islamic astronomy in this case Egypt and the Maghrib Another focuses on a curious astrological table for calculating the length of life of any individual The notion of the world centred on the sacred Kaaba in Mecca inspired both astronomers and proponents of folk astronomy to propose methods for finding the qibla or sacred direction towards the Kaaba their activities are surveyed here The interaction between the mathematical and folk traditions in astronomy is then illustrated by an 11th century text on the qibla in Transoxania The last three studies deal with an account of the geodetic measurements sponsored by the Caliph al

Ma m n in the 9th century a world map in the tradition of the 11th century polymath al B r n alas corrupted by careless copying and a table of geographical coordinates from 15th century Egypt

In Synchrony with the Heavens, Volume 1 Call of the Muezzin David King, 2004-02-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices

Roman Portable Sundials Richard J. A. Talbert, 2017 Talbert investigates miniature sundials which can be adjusted for the owner s whereabouts They incorporate a list of locations and latitudes for ready reference data that offers insight into Romans worldviews To some perhaps these sundials were primarily symbols of scientific awareness as well as imperial mastery of time and space

A General History of Horology Anthony Turner, James Nye, Jonathan Betts, 2022-07-28 A General History of Horology describes instruments used for the finding and measurement of time from Antiquity to the 21st century In geographical scope it ranges from East Asia to the Americas The instruments described are set in their technical and social contexts and there is also discussion of the literature the historiography and the collecting of the subject The book features the use of case studies to represent larger topics that cannot be completely covered in a single book The international body of authors have endeavoured to offer a fully world wide survey accessible to students historians collectors and the general reader based on a firm understanding of the technical basis of the subject At the same time as the work offers a synthesis of current knowledge of the subject it also incorporates the results of some fundamental new and original research

Through a Glass Brightly Chris Entwistle, 2016-09-28 The twenty five papers in this volume cover diverse aspects of the material culture of the late Roman Byzantine and Medieval periods with particular emphasis on the metalwork and enamel of these times Individual papers include major reinterpretations of objects in the British Museum s Byzantine collections as well as essays devoted to the Museum s recent acquisitions in this field The volume celebrates the retirement of David Buckton for over twenty years the curator of the British Museum s Early Christian and Byzantine collections and the National Icon Collection
