

# The Sunlit Zone (0~200m)

- Seawater rapidly absorbs sunlight, so only 1% of light reaches 200m below the surface
- Phytoplankton use the light to photosynthesize, forming the base of food chains
- This zone drives all ocean life
- More than 90% of all marine life lives here

**Oceanology** DK,2020-09-29 Dive into this uniquely elegant visual exploration of the sea An informative and utterly beautiful introduction to marine life and the ocean environment

Oceanology brings the riches of the underwater world onto the printed page. Astounding photography reveals an abundance of life from microscopic plankton to great whales, seaweed to starfish. Published in association with the Smithsonian Institution, the book explores every corner of the oceans from coral reefs and mangrove swamps to deep ocean trenches. Along the way and with the help of clear, simple illustrations, it explains how life has adapted to the marine environment, revealing for example how a stonefish delivers its lethal venom and how a sponge sustains itself by sifting food from passing currents. It also examines the physical forces and processes that shape the oceans from global circulation systems and tides to undersea volcanoes and tsunamis. To most of us, the marine world is out of reach. But with the help of photography and the latest technology, Oceanology brings us up close to animals, plants, and other living things that inhabit a fantastic and almost incomprehensibly beautiful other dimension.
