Symmetries Of Spacetimes And Riemannian Manifolds:

Symmetries of Spacetimes and Riemannian Manifolds Krishan L. Duggal, Ramesh Sharma, 2013-11-22 This book provides an upto date information on metric connection and curvature symmetries used in geometry and physics More specifically we present the characterizations and classifications of Riemannian and Lorentzian manifolds in particular the spacetimes of general relativity admitting metric i.e Killing holothetic and conformal connection i.e affine conformal and projective and curvature symmetries Our approach in this book has the following outstanding features a It is the first ever attempt of a comprehensive collection of the works of a very large number of researchers on all the above mentioned symmetries b We have aimed at bringing together the researchers interested in differential geometry and the mathematical physics of general relativity by giving an invariant as well as the index form of the main formulas and results c Attempt has been made to support several main mathematical results by citing physical examples as applied to general relativity d Overall the presentation is self contained fairly accessible and in some special cases supported by an extensive list of cited references e The material covered should stimulate future research on symmetries Chapters 1 and 2 contain most of the prerequisites for reading the rest of the book We present the language of semi Euclidean spaces manifolds their tensor calculus geometry of null curves non degenerate and degenerate light like hypersurfaces All this is described in invariant as well as the index form

Advances in Differential Geometry and General Relativity John K. Beem, Stamatis A. Dostoglou, Paul E. Ehrlich, 2004 This volume consists of expanded versions of invited lectures given at The Beemfest Advances in Differential Geometry and General Relativity University of Missouri Columbia on the occasion of Professor John K Beem's retirement The articles address problems in differential geometry in general and in particular global Lorentzian geometry Finsler geometry causal boundaries Penrose's cosmic censorship hypothesis the geometry of differential operators with variable coefficients on manifolds and asymptotically de Sitter spacetimes satisfying Einstein's equations with positive cosmological constant The book is suitable for graduate students and research mathematicians interested in differential geometry

Null Curves And Hypersurfaces Of Semi-riemannian Manifolds Krishan L Duggal, Ho Jin Dae, 2007-09-03 This is a first textbook that is entirely focused on the up to date developments of null curves with their applications to science and engineering It fills an important gap in a second level course in differential geometry as well as being essential for a core undergraduate course on Riemannian curves and surfaces The sequence of chapters is arranged to provide in depth understanding of a chapter and stimulate further interest in the next The book comprises a large variety of solved examples and rigorous exercises that range from elementary to higher levels This unique volume is self contained and unified in presenting

Recent Developments in Pseudo-Riemannian Geometry Dmitrii Vladimirovich Alekseevskii, 2008 This book provides an introduction to and survey of recent developments in pseudo Riemannian geometry including applications

in mathematical physics by leading experts in the field Topics covered are Classification of pseudo Riemannian symmetric spaces Holonomy groups of Lorentzian and pseudo Riemannian manifolds Hypersymplectic manifolds Anti self dual conformal structures in neutral signature and integrable systems Neutral Kahler surfaces and geometric optics Geometry and dynamics of the Einstein universe Essential conformal structures and conformal transformations in pseudo Riemannian geometry The causal hierarchy of spacetimes Geodesics in pseudo Riemannian manifolds Lorentzian symmetric spaces in supergravity Generalized geometries in supergravity Einstein metrics with Killing leaves The book is addressed to advanced students as well as to researchers in differential geometry global analysis general relativity and string theory It shows essential differences between the geometry on manifolds with positive definite metrics and on those with indefinite metrics and highlights the interesting new geometric phenomena which naturally arise in the indefinite metric case The reader finds a description of the present state of the art in the field as well as open problems which can stimulate further research

Handbook of Differential Geometry Franki J.E. Dillen, Leopold C.A. Verstraelen, 2005-11-29 In the series of volumes which together will constitute the Handbook of Differential Geometry we try to give a rather complete survey of the field of differential geometry The different chapters will both deal with the basic material of differential geometry and with research results old and recent All chapters are written by experts in the area and contain a large bibliography In this second volume a wide range of areas in the very broad field of differential geometry is discussed as there are Riemannian geometry Lorentzian geometry Finsler geometry symplectic geometry contact geometry complex geometry Lagrange geometry and the geometry of foliations Although this does not cover the whole of differential geometry the reader will be provided with an overview of some its most important areas Written by experts and covering recent research Extensive bibliography Dealing with a diverse range of areas Starting from the basics *Hermitian-Grassmannian Submanifolds* Young Jin Suh, Yoshihiro Ohnita, Jiazu Zhou, Byung Hak Kim, Hyunjin Lee, 2017-09-14 This book presents the proceedings of the 20th International Workshop on Hermitian Symmetric Spaces and Submanifolds which was held at the Kyungpook National University from June 21 to 25 2016 The Workshop was supported by the Research Institute of Real and Complex Manifolds RIRCM and the National Research Foundation of Korea NRF The Organizing Committee invited 30 active geometers of differential geometry and related fields from all around the globe to discuss new developments for research in the area These proceedings provide a detailed overview of recent topics in the field of real and complex submanifolds *Differential Geometry Of Warped Product Manifolds And Submanifolds* Bang-yen Chen, 2017-05-29 A warped product manifold is a Riemannian or pseudo Riemannian manifold whose metric tensor can be decomposed into a Cartesian product of the y geometry and the x geometry except that the x part is warped that is it is rescaled by a scalar function of the other coordinates y The notion of warped product manifolds plays very important roles not only in geometry but also in mathematical physics especially in general relativity In fact many basic solutions of the Einstein field equations including the Schwarzschild solution and the Robertson

Walker models are warped product manifolds The first part of this volume provides a self contained and accessible introduction to the important subject of pseudo Riemannian manifolds and submanifolds The second part presents a detailed and up to date account on important results of warped product manifolds including several important spacetimes such as Robertson Walker s and Schwarzschild s The famous John Nash s embedding theorem published in 1956 implies that every warped product manifold can be realized as a warped product submanifold in a suitable Euclidean space The study of warped product submanifolds in various important ambient spaces from an extrinsic point of view was initiated by the author around the beginning of this century The last part of this volume contains an extensive and comprehensive survey of numerous important results on the geometry of warped product submanifolds done during this century by many geometers

Geometry of Submanifolds and Applications Bang-Yen Chen,Majid Ali Choudhary,Mohammad Nazrul Islam
