Symplectic Cobordism And The Computation Of Stable Stems:

Symplectic Cobordism and the Computation of Stable Stems Stanley O. Kochman, 1993 This memoir consists of two independent papers In the first The symplectic cobordism ring III the classical Adams spectral sequence is used to study the symplectic cobordism ring capital Greek Omega superscript over subscript italic capital S subscript italic p In the second The symplectic Adams Novikov spectral sequence for spheres we analyze the symplectic Adams Novikov spectral sequence converging to the stable homotopy groups of spheres Stable Homotopy Around the Arf-Kervaire Invariant Victor P. Snaith, 2009-03-28 Were I to take an iron gun And re it o towards the sun I grant twould reach its mark at last But not till many years had passed But should that bullet change its force And to the planets take its course Twould never reach the nearest star Because it is so very far from FACTS by Lewis Carroll 55 Let me begin by describing the two purposes which prompted me to write this monograph This is a book about algebraic topology and more especially about homotopy theory Since the inception of algebraic topology 217 the study of homotopy classes of continuous maps between spheres has enjoyed a very exc n n tional central role As is well known for homotopy classes of maps $f: S^n \rightarrow S^n$ with $n \geq 1$ the sole homotopy invariant is the degree which characterises the homotopy class completely The search for a continuous map between spheres of different dimensions and not homotopic to the constant map had to wait for its resolution until the remarkable paper of Heinz Hopf 111 In retrospect nding 3 an example was rather easy because there is a canonical quotient map from S^3 to $S^1 \times S^2$ the orbitspace of the free circle action $S^1 \times S^3 \rightarrow S^3$ Manifolds and K -Theory Gregory Arone, Brenda Johnson, Pascal Lambrechts, Brian A. Munson, Ismar Volić, 2017-01-24 This volume contains the proceedings of the conference on Manifolds Theory and Related Topics held from June 23-27 2014 in Dubrovnik Croatia The articles contained in this volume are a collection of research papers featuring recent advances in homotopy theory theory and their applications to manifolds Topics covered include homotopy and manifold calculus structured spectra and their applications to group theory and the geometry of manifolds This volume is a tribute to the influence of Tom Goodwillie in these fields The Kinematic Formula in Riemannian Homogeneous Spaces Ralph Howard, 1993 This memoir investigates a method that generalizes the Chern Federer kinematic formula to arbitrary homogeneous spaces with an invariant Riemannian metric and leads to new formulas even in the case of submanifolds of Euclidean space *An Alpine Bouquet of Algebraic Topology* Jérôme Scherer, 2018-05-30 This volume contains the proceedings of the Alpine Algebraic and Applied Topology Conference held from August 15-21 2016 in Saas-Almagell Switzerland The papers cover a broad range of topics in modern algebraic topology including the theory of highly structured ring spectra infinity categories and Segal spaces equivariant homotopy theory algebraic theory and topological cyclic periodic or Hochschild homology intersection cohomology and symplectic topology **Automorphisms of the Lattice of Recursively Enumerable Sets** Peter Cholak, 1995 A version of Harrington's capital Greek Delta₃ automorphism technique for the lattice of recursively enumerable sets is introduced and developed by reproving Soare's

Extension Theorem Then this automorphism technique is used to show two technical theorems the High Extension Theorem I and the High Extension Theorem II This is a degree theoretic technique for constructing both automorphisms of the lattice of re sets and isomorphisms between various substructures of the lattice

Unraveling the Integral Knot Concordance

Group Neal W. Stoltzfus, 1977 The group of concordance classes of high dimensional homotopy spheres knotted in codimension two in the standard sphere has an intricate algebraic structure which this paper unravels The first level of invariants is given by the classical Alexander polynomial By means of a transfer construction the integral Seifert matrices of knots whose Alexander polynomial is a power of a fixed irreducible polynomial are related to forms with the appropriate Hermitian symmetry on torsion free modules over an order in the algebraic number field determined by the Alexander polynomial This group is then explicitly computed in terms of standard arithmetic invariants In the symmetric case this computation shows there are no elements of order four with an irreducible Alexander polynomial Furthermore the order is not necessarily Dedekind and non projective modules can occur The second level of invariants is given by constructing an exact sequence relating the global concordance group to the individual pieces described above The integral concordance group is then computed by a localization exact sequence relating it to the rational group computed by J Levine and a group of torsion linking forms

On the Correlation of Multiplicative and the Sum of Additive Arithmetic Functions Peter D. T. A.

Elliott, 1994 The correlation of multiplicative arithmetic functions on distinct arithmetic progressions and with values in the complex unit disc cannot be continually near to its possible maximum unless each function is either very close to or very far from a generalized character Moreover under accessible condition the second possibility can be ruled out As a consequence analogs of the standard limit theorems in probabilistic number theory are obtained with the classical single additive function on the integers replaced by a sum of two additive functions on distinct arithmetic progressions

Subgroup Lattices and Symmetric Functions Lynne M. Butler, 1994 This work presents foundational research on two approaches to studying subgroup lattices of finite abelian p groups The first approach is linear algebraic in nature and generalizes Knuth's study of subspace lattices This approach yields a combinatorial interpretation of the Betti polynomials of these Cohen Macaulay posets The second approach which employs Hall Littlewood symmetric functions exploits properties of Kostka polynomials to obtain enumerative results such as rank unimodality Butler completes Lascoux and Schützenberger's proof that Kostka polynomials are nonnegative then discusses their monotonicity result and a conjecture on Macdonald's two variable Kostka functions

Second-Order Sturm-Liouville Difference Equations and Orthogonal Polynomials Alouf Jirari, 1995 This memoir presents machinery for analyzing many discrete physical situations and should be of interest to physicists engineers and mathematicians We develop a theory for regular and singular Sturm Liouville boundary value problems for difference equations generalizing many of the known results for differential equations We discuss the self adjointness of these problems as well as their abstract spectral resolution in the appropriate italic capital L2 setting and give necessary and sufficient

conditions for a second order difference operator to be self adjoint and have orthogonal polynomials as eigenfunctions
