Symposia on Theoretical Physics and Mathematics 9 Alladi Ramakrishnan, 2012-12-06 This volume represents the proceedings of the Sixth Anniversary MATSCIENCE Symposium on Theoretical Physics held in January 1968 as well as the Seminar in Analysis held earlier in December 1967 A new feature of this volume is that it includes also contributions dealing with applications of mathematics to domains other than theoretical physics Accordingly the volume is divided into three parts Part I deals with theoretical physics Part II with applications of mathematical methods and Part III with pure mathematics The volume begins with a contribution from Okubo who proposed a new scheme to explain the CP puzzle by invoking the intermediate vector bosons Gordon Shaw from Irvine dealt with the crucial importance of the effects of CDD poles in partial wave dispersion relations in dynamical calculation of resonances Applications of current algebra and quark models were considered in the papers of Divakaran Ramachandran and Rajasekharan Dubin presented a rigorous formulation of the Heisenberg ferromagnet

Symposia on Theoretical Physics and Mathematics 8 Alladi Ramakrishnan, 2013-03-09 This volume comprises the lectures given at the Fifth Anniversary Symposium held at the Institute of Mathematical Sciences Madras India during January 1967 Professor Dallaporta of Padua delivered the inaugural address on the fundamental problem of quasars whose study appears to hold implications for cosmology He presented a critical review of several attempts to understand their exceptionally large red shifts and also discussed the physical theories concerning the cause of the explosions which give rise to the quasars and to the tremendous energy output they require questions which still remain unanswered He stated in concluding that we may have to invoke certain aspects of the present theories of elementary particles in order to unravel these mysteries Professor Mercier well known for his studies on the philosophical foundations of modern physics critically examined the various attempts such as that of Einstein to formulate a unified field theory

This volume is the refereed proceedings of the Sixth Canadian Conference on General Relativity and Relativistic Astrophysics held in May 1995 at the University of New Brunswick. The book includes invited talks and contributed talks and posters including state-of-the-art reviews of many of the most recent important developments in gravitational physics. This book would serve as a good supplement to standard texts on the topic. It features review articles in key areas: black holes, numerical relativity, etc. Contributions covering most of gravitational physics, useful articles for students who wish to begin exploring the issues discussed, and invited talks given by researchers known for their ability to communicate their expertise.
