Open Problems in Topology J. van Mill, George M. Reed, 1990 From the Introduction This volume grew from a discussion by the editors on the difficulty of finding good thesis problems for graduate students in topology Although at any given time we each had our own favorite problems we acknowledged the need to offer students a wider selection from which to choose a topic peculiar to their interests One of us remarked Wouldn't it be nice to have a book of current unsolved problems always available to pull down from the shelf The other replied Why don't we simply produce such a book Two years later and not so simply here is the resulting volume The intent is to provide not only a source book for thesis level problems but also a challenge to the best researchers in the field

Harmonic Analysis, Partial Differential Equations, Complex Analysis, Banach Spaces, and Operator Theory (Volume 1) María Cristina Pereyra, Stefania Marcantognini, Alexander M. Stokolos, Wilfredo Urbina, 2016-09-15 Covering a range of subjects from operator theory and classical harmonic analysis to Banach space theory this book contains survey and expository articles by leading experts in their corresponding fields and features fully refereed high quality papers exploring new results and trends in spectral theory mathematical physics geometric function theory and partial differential equations Graduate students and researchers in analysis will find inspiration in the articles collected in this volume which emphasize the remarkable connections between harmonic analysis and operator theory Another shared research interest of the contributors of this volume lies in the area of applied harmonic analysis where a new notion called chromatic derivatives has recently been introduced in communication engineering The material for this volume is based on the 13th New Mexico Analysis Seminar held at the University of New Mexico April 3-4 2014 and on several special sections of the Western Spring Sectional Meeting at the University of New Mexico April 4-6 2014 During the event participants honored the memory of Cora Sadosky a great mathematician who recently passed away and who made significant contributions to the field of harmonic analysis Cora was an exceptional mathematician and human being She was a world expert in harmonic analysis and operator theory publishing over fifty five research papers and authoring a major textbook in the field Participants of the conference include new and senior researchers recent doctorates as well as leading experts in the area

Topics in Banach Space Theory Fernando Albiac, Nigel J. Kalton, 2016-07-19 This text provides the reader with the necessary technical tools and background to reach the frontiers of research without the introduction of too many extraneous concepts Detailed and accessible proofs are included as are a variety of exercises and problems The two new chapters in this second edition are devoted to two topics of much current interest amongst functional analysts Greedy approximation with respect to bases in Banach spaces and nonlinear geometry of Banach spaces This new material is intended to present these two directions of research for their intrinsic importance within Banach space theory and to motivate graduate students interested in learning more about them This textbook assumes only a basic knowledge of

functional analysis giving the reader a self contained overview of the ideas and techniques in the development of modern Banach space theory Special emphasis is placed on the study of the classical Lebesgue spaces L_p and their sequence space analogues and spaces of continuous functions The authors also stress the use of bases and basic sequences techniques as a tool for understanding the isomorphic structure of Banach spaces From the reviews of the First Edition The authors of the book succeeded admirably in creating a very helpful text which contains essential topics with optimal proofs while being reader friendly It is also written in a lively manner and its involved mathematical proofs are elucidated and illustrated by motivations explanations and occasional historical comments I strongly recommend to every graduate student who wants to get acquainted with this exciting part of functional analysis the instructive and pleasant reading of this book Gilles Godefroy Mathematical Reviews *Cumulative Book Index* ,1972 Martingales in Banach Spaces Gilles Pisier,2016-06-06 This book focuses on the major applications of martingales to the geometry of Banach spaces and a substantial discussion of harmonic analysis in Banach space valued Hardy spaces is also presented It covers exciting links between super reflexivity and some metric spaces related to computer science as well as an outline of the recently developed theory of non commutative martingales which has natural connections with quantum physics and quantum information theory Requiring few prerequisites and providing fully detailed proofs for the main results this self contained study is accessible to graduate students with a basic knowledge of real and complex analysis and functional analysis Chapters can be read independently with each building from the introductory notes and the diversity of topics included also means this book can serve as the basis for a variety of graduate courses Pacific Journal of Mathematics ,1982-12 **Bibliographic Index** ,1973

Handbook of Geometric Topology R.B. Sher,R.J. Daverman,2001-12-20 Geometric Topology is a foundational component of modern mathematics involving the study of spacial properties and invariants of familiar objects such as manifolds and complexes This volume which is intended both as an introduction to the subject and as a wide ranging resource for those already grounded in it consists of 21 expository surveys written by leading experts and covering active areas of current research They provide the reader with an up to date overview of this flourishing branch of mathematics **Scientific and Technical Books in Print** ,1972
