Symposium On The Theory Of Scheduling And Its Applications:

Symposium on the Theory of Scheduling and Its Applications S. E. Elmaghraby, 2012-12-06 The theory of scheduling is receiving increased emphasis in research and practice for at least three good reasons First the management of large scale projects resolves itself in the final analysis into problems of scheduling interacting activities subject to limited resources Second a great deal of fat that used to exist in the past in production distribution and service systems is eliminated thanks to tighter managerial controls in information systems in financial management in logistics and in many other facets of industrial enterprises and military installations Tighter scheduling methods are therefore called for Third the study of scheduling problems involves the study of combinatorial problems and optimization over discrete spaces which represent a radical and interesting departure from classical mathematics This area of study has attracted a good number of distinguished researchers engineers as well as mathematicians There is a serious attempt to apply known number theory and perhaps develop new theory that would cope with the new problems The computer enters the picture in novel and ingenious ways which has not been possible before etc To those working in the area whether in theory or in practice progress proceeds at an exhilarating pace with new mathematical structures and computational approaches being continuously introduced to model and solve the problems in novel and oftentimes ingenious ways

Symposium on the Theory of Scheduling and Its Applications, North Carolina State University, 1972 Salah Eldin Elmaghraby, 1973 Evolutionary Computing Terence C. Fogarty, 1996-09-11 This book contains a selection of papers presented at a workshop on evolutionary computing sponsored by the Society for the Study of Artificial Intelligence and Simulation of Behaviour AISB at the University of Sussex in Brighton UK in April 1996 The 22 revised full papers included in the book together with one invited contribution were carefully reviewed by the program committee Twelve contributions investigate applications of evolutionary computing in various areas such as learning scheduling searching genetic programming image processing and robotics Eleven papers are devoted to evolutionary computing theory and techniques

1992 Goddard Conference on Space Applications of Artificial Intelligence James L. Rash, 1992 Symposium on the theory of scheduling and its applications, held at Raleigh, N. C., May 15-17, 1972 S. E. Elmaghraby, 1973 Disaggregation L.P. Ritzman, M. Tvrđý, 2013-03-09 This volume is intended to expand the dialogue and interest among both practitioners and academicians in a problem area worthy of attention by all The concept of disaggregation admits to our current inability to solve many types of interrelated hierarchical problems simultaneously It offers instead a sequential iterative process as a workable and necessary procedure The papers in this volume are selected from those presented at a Disaggregation Conference held in March 1977 at The Ohio State University We heartily applaud all those who participated in the conference and particularly appreciate the cooperation of those authors whose work is published in this collection Part A contains four papers which define the various dimensions of disaggregation The paper by Martin Starr which was the text of his luncheon address at the conference provides several

interesting perspectives to the problem Although disaggregation suggests tearing apart as Professor Starr illustrates with his butterfly example it also suggests a putting together or a synthesis which recognizes interrelationships and dependencies The next paper by Lee Kra jewski and Larry Ritzman offers a general model of disaggregation for both the manufacturing and service sectors After reading the papers in this section as well as the papers in subsequent sections you will identify other dimensions to hierarchical decision making which go beyond this generalized model

Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries
