BOOK JACKET Systems Engineering for Business Process Change

Peter Henderson, 2012-12-06 A very large proportion of commercial and industrial concerns in the UK find their business competitiveness dependent on huge quantities of already installed legacy IT. Often the nature of their business is such that to remain competitive they have to be able to change their business processes. Sometimes the required change is radical and revolutionary but more often the required change is incremental. For such incremental change a major systems engineering problem arises. The cost and delay involved in changing the installed IT to meet the changed business requirements is much too high. In order to address this issue the UK Engineering and Physical Science Research Council EPSRC set up in 1996 a managed research programme entitled Systems Engineering for Business Process Change SEBPC. I was appointed as co-ordinator of the programme. The overall aim of this new managed research programme was to release the full potential of IT as an enabler of business process change and to overcome the disabling effects which the build up of legacy systems has on such change. As such this aim addressed a stated objective of the Information Technology and Computer Science IT/CS part of EPSRC to encourage research at a system level.

Advances in the Study of Behavior Peter J.B. Slater, Jay S. Rosenblatt, Charles T. Snowdon, Timothy J. Roper, Marc Naguib, 2003-12-18 The aim of *Advances in the Study of Behavior* remains as it has been since the series began to serve the increasing number of scientists who are engaged in the study of animal behavior by presenting their theoretical ideas and research to their colleagues and to those in neighboring fields. We hope that the series will continue its contribution to the development of the field as its intended role was phrased in the Preface to the first volume in 1965. Since that time traditional areas of animal behavior have achieved new vigor by the links they have formed with related fields and by the closer relationship that now exists between those studying animal and human subjects.
