Malcuit,2015 This book explains how it came to be that Venus and Earth while very similar in chemical composition zonation size and heliocentric distance from the Sun are very different in surface environmental conditions It is argued here that these differences can be accounted for by planetoid capture processes and the subsequent evolution of the planet satellite system Venus captured a one half moon mass planetoid early in its history in the retrograde direction and underwent its fatal attraction scenario with its satellite Adonis Earth on the other hand captured a moon mass planetoid Luna early in its history in prograde orbit and underwent a benign estrangement scenario with its captured satellite **National Program of Inspection of Dams** United States.
