Golson, Tim Denham, Philip Hughes, Pamela Swadling, John Muke, 2017-07-07 Kuk is a settlement at c 1600 m altitude in the upper Wahgi Valley of the Western Highlands Province of Papua New Guinea near Mount Hagen the provincial capital The site forms part of the highland spine that runs for more than 2500 km from the western head of the island of New Guinea to the end of its eastern tail Until the early 1930s when the region was first explored by European outsiders it was thought to be a single uninhabited mountain chain Instead it was found to be a complex area of valleys and basins inhabited by large populations of people and pigs supported by the intensive cultivation of the tropical American sweet potato on the slopes above swampy valley bottoms With the end of World War II the area with others became a focus for the development of coffee and tea plantations of which the establishment of Kuk Research Station was a result Large scale drainage of the swamps produced abundant evidence in the form of stone axes and preserved wooden digging sticks and spades for their past use in cultivation Investigations in 1966 at a tea plantation in the upper Wahgi Valley by a small team from The Australian National University yielded a date of over 2000 years ago for a wooden stick collected from the bottom of a

prehistoric ditch The establishment of Kuk Research Station a few kilometres away shortly afterwards provided an ideal opportunity for a research project      **Ecology of Indonesian Papua Part One** Andrew J. Marshall, Bruce M.

Beehler, 2011-07-19 The Ecology of Papua provides a comprehensive review of current scientific knowledge on all aspects of the natural history of western Indonesian New Guinea Designed for students of conservation environmental workers and academic researchers it is a richly detailed text dense with biogeographical data historical reference and fresh insight on this complicated and marvelous region We hope it will serve to raise awareness of Papua on a global as well as local scale and to catalyze effective conservation of its most precious natural assets New Guinea is the largest and highest tropical island and one of the last great wilderness areas remaining on Earth Papua the western half of New Guinea is noteworthy for its equatorial glaciers its vast forested floodplains its imposing central mountain range its Raja Ampat Archipelago and its several hundred traditional forest dwelling societies One of the wildest places left in the world Papua possesses extraordinary biological and cultural diversity Today Papua's environment is under threat from growing outside pressures to exploit its expansive forests and to develop large plantations of oil palm and biofuels It is important that Papua's leadership balance economic development with good resource management to ensure the long term well being of its culturally diverse populace

Genes, Language, & Culture History in the Southwest Pacific Jonathan S. Friedlaender, 2007-04-19 The broad arc of islands north of Australia that extends from Indonesia east towards the central Pacific is home to a set of human populations whose concentration of diversity is unequaled elsewhere Approximately 20% of the world's languages are spoken here and the biological and genetic heterogeneity among the groups is extraordinary Anthropologist W W Howells once declared diversity in the region so Protean as to defy analysis However this book can now claim considerable success in describing and understanding the origins of the genetic and linguistic variation there In order to cut through this biological knot the authors have applied a comprehensive battery of genetic analyses to an intensively sampled set of populations and have subjected these and complementary linguistic data to a variety of phylogenetic analyses This has revealed a number of heretofore unknown ancient Pleistocene genetic variants that are only found in these island populations and has also identified the genetic footprints of more recent migrants from Southeast Asia who were the ancestors of the Polynesians The book lays out the very complex structure of the variation within and among the islands in this relatively small region and a number of explanatory models are tested to see which best account for the observed pattern of genetic variation here The results suggest that a number of commonly used models of evolutionary divergence are overly simple in their assumptions and that often human diversity has accumulated in very complex ways      **Taking the High Ground** Atholl

Anderson, Douglas J. Kennett, 2012-11-01 This volume brings the remote and little known island of Rapa firmly to the forefront of Polynesian archaeology Thirteen authors contribute 14 chapters covering not only the basic archaeology of coastal sites rock shelters and fortifications but faunal remains agricultural development and marine exploitation The results presented

within a chronology framed by Bayesian analysis are set against a background of ethnohistory and ethnology Highly unusual in tropical Polynesian archaeology are descriptions of artefacts of perishable material Taking the High Ground provides important insights into how a group of Polynesian settlers adapted to an isolated and in some ways restrictive environment
