geography history culture and politics the book promises to forever change the way we look at mountains

Dynamics and Stochasticity in Transportation Systems Part II Giulio E Cantarella, Chiara Fiori, Lorenzo Mussone, 2024-01-04 Dynamics and Stochasticity in Transportation Systems Part II Equations and Examples goes beyond theory and mathematical models to give readers a practical understanding of dynamic and stochastic assignment modeling approaches in transportation systems. These approaches are critical for the future of transportation systems analysis providing a better understanding of system evolution over time and of travelers behavior in challenging scenarios including ITS as well as new services such as shared vehicles and new kinds of vehicles such as connected or autonomous vehicles. After an introduction in chapter 1 chapters 2-5 each provide an introduction followed by recent advances review of contents of the corresponding chapters in Giulio Cantarella's previous book discussion of numerical examples matching the sections a summary and final remarks. Readers will appreciate the fully discussed numerical examples applications to real cases review of recent developments and other materials not easily available in the literature such as long proofs. This book bridges the mathematical theory with operational needs in a way that no current book does with practical real world cases and examples. Academics researchers and instructors as well as professionals practitioners and consultants will find this a valuable resource for solving network equilibrium problems in transportation systems analysis. Covers dynamic aspects of transportation network analysis through application of mathematical models to real cases. Discusses operational issues of mathematical models for evaluation of traffic and transport demand interventions giving readers a practical approach to these problems and bridging theoretical and operational aspects together. Presents recent new developments and the latest research findings since 2019. Includes numerical examples and applications supported by several figures and tables allowing the reader to reproduce the presented results.

Tectonic Aspects of the Alpine-Dinaride-Carpathian System Siegfried Siegesmund, Bernhard Fügenschuh, Niko Froitzheim, 2008 The Alps Carpathians and Dinarides form a complex highly curved and strongly coupled orogenic system. Motions of the European and Adriatic plates gave birth to a number of oceans and microplates that led to several distinct stages of collision. Although the Alps serve as a classical example of collisional orogens it becomes clearer that substantial questions on their evolution can only be answered in the Carpathians and Dinarides. Our understanding of the geodynamic evolution of the Alpine Dinaride Carpathian System has substantially improved and will continue to develop this is thanks to collaboration between eastern and western Europe but also due to the application of new methods and the launch of research initiatives. The largely field based contributions investigate the following subjects pre Alpine heritage and Alpine reactivation Mesozoic palaeogeography and Alpine subduction and collision processes extrusion tectonics from the Eastern Alps to the Carpathians and the Pannonian Basin orogen parallel and orogen perpendicular extension record of orogeny in foreland basins tectonometamorphic evolution and relations between the Alps Apennines and Corsica
