Matrix Functions of Bounded Type: An Interplay Between Function Theory and Operator Theory Raúl E. Curto, In Sung Hwang, Woo Young Lee, 2019-09-05 In this paper the authors study matrix functions of bounded type from the viewpoint of describing an interplay between function theory and operator theory They first establish a criterion on the coprimeness of two singular inner functions and obtain several properties of the Douglas Shapiro Shields factorizations of matrix functions of bounded type They propose a new notion of tensored scalar singularity and then answer questions on Hankel operators with matrix valued bounded type symbols They also examine an interpolation problem related to a certain functional equation on matrix functions of bounded type this can be seen as an extension of the classical Hermite Fejér Interpolation Problem for matrix rational functions The authors then extend the H^∞ functional calculus to an H^∞ functional calculus for the compressions of the shift Next the authors consider the subnormality of Toeplitz operators with matrix valued bounded type symbols and in particular the matrix valued version of Halmos's Problem 5 and then establish a matrix valued version of Abrahamse's Theorem They also solve a subnormal Toeplitz completion problem of 2×2 partial block Toeplitz matrices Further they establish a characterization of hyponormal Toeplitz pairs with matrix valued bounded type symbols and then derive rank formulae for the self commutators of hyponormal Toeplitz pairs
