Kitson,2004-09-02 In 1768 Captain James Cook made the most important scientific voyage of the eighteenth century He was not alone scores of explorers like Cook travelling in the name of science brought new worlds and new peoples within the horizon of European knowledge for the first time Their discoveries changed the course of science Old scientific disciplines such as astronomy and botany were transformed new ones like craniology and comparative anatomy were brought into being Scientific disciplines in turn pushed literature of the period towards new subjects forms and styles Works as diverse as Mary Shelley s Frankenstein and Wordsworth s Excursion responded to the explorers and scientists latest discoveries This wide ranging and well illustrated study shows how literary Romanticism arose partly in response to science s appropriation of explorers encounters with foreign people and places and how it in turn changed the profile of science and exploration **Cohesion** J. nation magnetic instruments such as navigational compasses heralded imperial expansion commercial gain and scientific progress By analyzing such multiple associations Fara reconstructs cultural interactions in the days just prior to the creation of disciplinary science Not only does this illustrated book provide a kaleidoscopic view of a changing society but it also portrays the emergence of public science Linking this rise in interest to the utility and mysteriousness of magnetism Fara organizes her discussion into themes including commercialization imperialism instruments and invention the role of language attitudes toward the past and the relationship between religion and natural philosophy Fara shows that natural philosophers proclaiming themselves as the only true experts on magnetism actively participated in massive transformations of English life In their bids for public recognition as elite specialists they engaged in controversies that resonated with religious economic moral gender and political implications These struggles for social and scientific authority in the eighteenth century provide the background for better understanding the cultural topography of modern society Originally published in 1996 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Sensibility and the American Revolution Sarah Knott, 2009 In the wake of American independence it was clear that the new United States required novel political forms Less obvious but no less revolutionary was the idea that the American people needed a new understanding of the self Sensibility was a cultural movement that celebrated the human capacity for sympathy and sensitivity to the world For individuals it offered a means of self transformation For a nation lacking a monarch state religion or standing army sensibility provided a means of cohesion National independence and social interdependence facilitated one another What Sarah Knott calls the sentimental project helped a new kind of citizen create a new kind of government Knott paints sensibility as a political project whose fortunes rose and fell with the broader tides of the Revolutionary Atlantic world Moving beyond traditional accounts of social unrest republican and liberal ideology and the rise of the autonomous individual she offers an original interpretation of the American Revolution as a transformation of self and society

Oliver Wendell Holmes and the Culture of Conversation Peter Gibian, 2001-08-30 Peter Gibian explores the key role played by Oliver Wendell Holmes in what was known as America's Age of Conversation He was both a model and an analyst of the dynamic conversational form which became central to many areas of mid nineteenth century life Holmes multivoiced writings can serve as a key to open up the closed interiors of Victorian America whether in saloons or salons

parlours or clubs hotels or boarding houses schoolrooms or doctors offices Combining social intellectual medical legal and literary history with close textual analysis and setting Holmes in dialogue with Emerson Hawthorne Melville Fuller Alcott and finally with his son Justice Oliver Wendell Holmes Junior Gibian radically redefines the context for our understanding of the major literary works of the American Renaissance **Distilling Knowledge** Bruce T. MORAN, Bruce T Moran, 2009-06-30

Alchemy can't be science common sense tells us as much But perhaps common sense is not the best measure of what science is or was In this book Bruce Moran looks past contemporary assumptions and prejudices to determine what alchemists were actually doing in the context of early modern science Examining the ways alchemy and chemistry were studied and practiced between 1400 and 1700 he shows how these approaches influenced their respective practitioners ideas about nature and shaped their inquiries into the workings of the natural world His work sets up a dialogue between what historians have usually presented as separate spheres here we see how alchemists and early chemists exchanged ideas and methods and in fact shared a territory between their two disciplines Distilling Knowledge suggests that scientific revolution may wear a different appearance in different cultural contexts The metaphor of the Scientific Revolution Moran argues can be expanded to make sense of alchemy and other so called pseudo sciences by including a new framework in which process can count as an object in which making leads to learning and in which the messiness of conflict leads to discernment Seen on its own terms alchemy can stand within the bounds of demonstrative science **Science and Spectacle in the European Enlightenment** Bernadette Bensaude-Vincent, 2016-12-05

Air pumps electrical machines colliding ivory balls coloured sparks mechanical planetariums magic mirrors hot air balloons these are just a sample of the devices displayed in public demonstrations of science in the eighteenth century Public and private demonstrations of natural philosophy in Europe then differed vastly from today's unadorned and anonymous laboratory experiments Science was cultivated for a variety of purposes in many different places scientific instruments were built and used for investigative and didactic experiments as well as for entertainment and popular shows Between the culture of curiosities which characterized the seventeenth century and the distinction between academic and popular science that gradually emerged in the nineteenth the eighteenth century was a period when scientific activities took place in a variety of sites ranging from academies and learned societies to salons and popular fairs shops and streets This collection of case studies describing public demonstrations in Britain Germany Italy and France exemplifies the wide variety of settings for scientific activities in the European Enlightenment Filled with sparks and smells the essays raise broader issues about the ways in which modern science established its legitimacy and social acceptability They point to two major features of the cultures of science in the eighteenth century entertainment and utility Experimental demonstrations were attended by apothecaries and craftsmen for vocational purposes At the same time they had to fit in with the taste of both polite society and market culture Public demonstrations were a favourite entertainment for ladies and gentlemen and a profitable activity for instrument makers and booksellers Sympathy, Sensibility and the

Aristotelianism and Magic in Early Modern Europe Donato Verardi, 2023-06-15 Reframing Aristotle's natural philosophy this wide ranging collection of essays reveals the centrality of magic to his thinking From late medieval and Renaissance discussions on the attribution of magical works to Aristotle to the philosophical and social justifications of magic international contributors chart magic as the mother science of natural philosophy Tracing the nascent presence of Aristotelianism in early modern Europe this volume shows the adaptability and openness of Aristotelianism to magic Weaving the paranormal and the scientific together it pairs the supposed superstition of the pre modern era with modern scientific sensibilities Essays focus on the work of early modern scholars and magicians such as Giambattista Della Porta Wolferd Senguerd and Johann Nikolaus Martius The attribution of the *Secretum secretorum* to Aristotle the role of illusionism and the relationship between the technical and magical all provide further insight into the complex picture of magic Aristotle and early modern Europe Aristotelianism and Magic in Early Modern Europe proposes an innovative way of approaching the development of pre modern science whilst also acknowledging the crucial role that concepts like magic and illusion played in Aristotle's time
