Symplectic Geometry Groupoids And Integrable Systems:

Symplectic Geometry, Groupoids, and Integrable Systems Pierre Dazord, Alan Weinstein, 2012-12-06 The papers some of which are in English the rest in French in this volume are based on lectures given during the meeting of the Seminaire Sud Rhodanien de Geometrie SSRG organized at the Mathematical Sciences Research Institute in 1989 The SSRG was established in 1982 by geometers and mathematical physicists with the aim of developing and coordinating research in symplectic geometry and its applications to analysis and mathematical physics Among the subjects discussed at the meeting a special role was given to the theory of symplectic groupoids the subject of fruitful collaboration involving geometers from Berkeley Lyon and Montpellier

Symplectic Geometry and Mathematical Physics P. Donato, 1991-12 This volume contains the proceedings of the conference Colloque de Geometrie Symplectique et Physique Mathematique which was held in Aix en Provence France June 11 15 1990 in honor of Jean Marie Souriau The conference was one in the series of international meetings of the Seminaire Sud Rhodanien de Geometrie an organization of geometers and mathematical physicists at the Universities of Avignon Lyon Mar seille and Montpellier The scientific interests of Souriau one of the founders of geometric quantization range from classical mechanics symplectic geometry and quantization problems to general relativity and astrophysics The themes of this conference cover only the first two of these four areas The subjects treated in this volume could be classified in the follow ing way symplectic and Poisson geometry Arms Wilbour Bloch Ratiu Brylinski Kostant Cushman Sjamaar Dufour Lichnerowicz Medina Ouzilou classical mechanics Benenti Holm Marsden Marle particles and fields in physics Garcia Perez Munoz Masque Gotay Montgomery Ne eman Sternberg Sniatycki and quantization Blattner Huebschmann Karasev Rawnsley Roger Rosso Weinstein However these subjects are so interrelated that a classification by headings such as pure differential geometry applications of Lie groups constrained systems in physics etc would have produced a completely different clustering The list of authors is not quite identical to the list of speakers at the conference M Karasev was invited but unable to attend C Itzykson and M Vergne spoke on work which is represented here only by the title of Itzykson s talk Surfaces triangulees et integration matricielle and a summary of Vergne s talk

Quantum Field Theory and Noncommutative Geometry Ursula Carow-Watamura, Yoshiaki Maeda, 2005-02-21 This volume reflects the growing collaboration between mathematicians and theoretical physicists to treat the foundations of quantum field theory using the mathematical tools of q deformed algebras and noncommutative differential geometry A particular challenge is posed by gravity which probably necessitates extension of these methods to geometries with minimum length and therefore quantization of space This volume builds on the lectures and talks that have been given at a recent meeting on Quantum Field Theory and Noncommutative Geometry A considerable effort has been invested in making the contributions accessible to a wider community of readers so this volume will not only benefit researchers in the field but also postgraduate students and scientists from related areas wishing to become better acquainted with this field

Integrability of Nonlinear Systems Yvette Kosmann-Schwarzbach, Basil Grammaticos, K.M. Tamizhmani, 2004-02-17 The lectures that comprise this volume constitute a comprehensive survey of the many and various aspects of integrable dynamical systems The present edition is a streamlined revised and updated version of a 1997 set of notes that was published as Lecture Notes in Physics Volume 495 This volume will be complemented by a companion book dedicated to discrete integrable systems Both volumes address primarily graduate students and nonspecialist researchers but will also benefit lecturers looking for suitable material for advanced courses and researchers interested in specific topics

Commutative Algebra and Noncommutative Algebraic Geometry David Eisenbud, Srikanth B. Iyengar, Anurag K. Singh, J. Toby Stafford, Michel Van den Bergh, 2015-11-19 This book surveys fundamental current topics in these two areas of research emphasising the lively interaction between them Volume 2 focuses on the most recent research

Comparison Geometry Karsten Grove, Peter Petersen, 1997-05-13 This is an up to date work on a branch of Riemannian geometry called Comparison Geometry

A Sampler of Riemann-Finsler Geometry David Dai-Wai Bao, 2004-11 These expository accounts treat issues related to volume geodesics curvature and mathematical biology with instructive examples

A Window Into Zeta and Modular Physics Klaus Kirsten, Floyd L. Williams, 2010-05-24 Consists of lectures that are part of the MSRI workshops and that introduce students and researchers to the intriguing world of theoretical physics

Model Theory, Algebra, and Geometry Deirdre Haskell, Anand Pillay, Charles Steinhorn, 2000-07-03 Model theory has made substantial contributions to semialgebraic subanalytic p adic rigid and diophantine geometry These applications range from a proof of the rationality of certain Poincare series associated to varieties over p adic fields to a proof of the Mordell Lang conjecture for function fields in positive characteristic In some cases such as the latter it is the most abstract aspects of model theory which are relevant This book originally published in 2000 arising from a series of introductory lectures for graduate students provides the necessary background to understanding both the model theory and the mathematics behind these applications The book is unique in that the whole spectrum of contemporary model theory stability simplicity of minimality and variations is covered and diverse areas of geometry algebraic diophantine real analytic p adic and rigid are introduced and discussed all by leading experts in their fields

Current Topics in Complex Algebraic Geometry Charles Herbert Clemens, Janos Kollár, 1995 The 1992-93 academic year at the Mathematical Sciences Research Institute was devoted to complex algebraic geometry This volume collects survey articles that arose from this event which took place at a time when algebraic geometry was undergoing a major change The editors of the volume Herbert Clemens and Janos Kollár chaired the organizing committee This book gives a good idea of the intellectual content of the special year and of the workshops Its articles represent very well the change of direction and branching out witnessed by algebraic geometry in the last few years

Hamiltonian Mechanical Systems and Geometric Quantization Mircea Puta, 2012-12-06 This volume presents various aspects of the geometry of symplectic and Poisson manifolds and applications in Hamiltonian mechanics and geometric quantization are indicated Chapter 1 presents some general facts about symplectic vector space symplectic manifolds and symplectic reduction Chapter 2 deals with the study of Hamiltonian mechanics Chapter 3 considers some standard facts concerning Lie groups and algebras which lead to the theory of momentum mappings and the Marsden Weinstein reduction Chapters 4 and 5 consider the theory and the stability of equilibrium solutions of Hamilton-Poisson mechanical systems Chapters 6 and 7 are devoted to the theory of geometric quantization This leads in Chapter 8 to topics such as foliated cohomology the theory of the Dolbeault-Kostant complex and their applications A discussion of the relation between geometric quantization and the Marsden Weinstein reduction is presented in Chapter 9 The final chapter considers extending the theory of geometric quantization to Poisson manifolds via the theory of symplectic groupoids Each chapter concludes with problems and solutions many of which present significant applications and in some cases major theorems For graduate students and researchers whose interests and work involve symplectic geometry and Hamiltonian mechanics

Momentum Maps and Hamiltonian Reduction Juan-Pablo Ortega, Tudor S. Ratiu, 2013-04-17

The use of the symmetries of a physical system in the study of its dynamics has a long history that goes back to the founders of classical mechanics. Symmetry based techniques are often implemented by using the integrals of motion that one can sometimes associate to these symmetries. The integrals of motion of a dynamical system are quantities that are conserved along the flow of that system. In classical mechanics symmetries are usually induced by point transformations that is they come exclusively from symmetries of the configuration space. The intimate connection between integrals of motion and symmetries was formalized in this context by NOETHER 1918. This idea can be generalized to many symmetries of the entire phase space of a given system by associating to the Lie algebra action encoding the symmetry a function from the phase space to the dual of the Lie algebra. This map whose level sets are preserved by the dynamics of any symmetry system is referred to in modern terms as a momentum map of the symmetry, a construction already present in the work of LIE 1890. Its remarkable properties were rediscovered by KOSTANT 1965 and SOURIAU 1966, 1969 in the general case and by SMALE 1970 for the lifted action to the co tangent bundle of a configuration space. For the history of the momentum map we refer to WEINSTEIN 1983b and MARSDEN AND RATIU 1999, 11-2.

Flavors of Geometry Silvio Levy, 1997-09-28. *Flavors of Geometry* is a volume of lectures on four geometrically influenced fields of mathematics that have experienced great development in recent years. Growing out of a series of introductory lectures given at the Mathematical Sciences Research Institute in January 1995 and January 1996, the book presents chapters by masters in their respective fields on hyperbolic geometry, dynamics in several complex variables, convex geometry and volume estimation. Each lecture begins with a discussion of elementary concepts, examines the highlights of the field and concludes with a look at more advanced material. The style and presentation of the chapters are clear and accessible and most of the lectures are richly illustrated. Bibliographies and indexes are included to encourage further reading on the topics discussed.

Mechanics Day W. F. Shadwick, Perinkulam Sambamurthy Krishnaprasad, Tudor S. Ratiu, 1996. This volume presents the proceedings of a workshop held at The Fields Institute in June 1992, both as a commemoration of the 25th anniversary of the publication of *Foundations of Mechanics* by Ralph Abraham and Jerrold Marsden and as a celebration of Marsden's 50th birthday. The publication of that first edition marked a period of remarkable resurgence in all aspects of mechanics which has continued through the publication of the second edition in 1978, deeply nourished by contacts with a variety of areas of mathematics including topology, differential geometry, Lie theory and partial differential equations.

Lectures on the Geometry of Poisson Manifolds Izu Vaisman, 2012-12-06. This book is addressed to graduate students and researchers in the fields of mathematics and physics who are interested in mathematical and theoretical physics, differential geometry, mechanics, quantization theories and quantum physics, quantum groups etc. and who are familiar with differentiable and symplectic manifolds. The aim of the book is to provide the reader with a monograph that enables him to study systematically basic and advanced material on the recently developed theory of Poisson manifolds and that also offers ready access to bibliographical references for the

continuation of his study Until now most of this material was dispersed in research papers published in many journals and languages The main subjects treated are the Schouten Nijenhuis bracket the generalized Frobenius theorem the basics of Poisson manifolds Poisson calculus and cohomology quantization Poisson morphisms and reduction realizations of Poisson manifolds by symplectic manifolds and by symplectic groupoids and Poisson Lie groups The book unifies terminology and notation It also reports on some original developments stemming from the author's work including new results on Poisson cohomology and geometric quantization cofoliations and biinvariant Poisson structures on Lie groups
