Recent evidence has shown many ways in which our bodies and the environment influence cognition In this Research Topic we aim to develop our understanding of cognition by considering the diverse and dynamic relationship between the language we use our bodily perceptions and our actions and interactions in the broader environment There are already many empirical effects illustrating the continuity of mind body environment manipulating body posture influences diverse areas such as mood hormonal responses and perception of risk directing attention to a particular sensory modality can affect language processing signal detection and memory performance placing implicit cues in the environment can impact upon social behaviours moral judgements and economic decision making This Research Topic includes papers that explore the question of how our bodies and the environment influence cognition such as how we mentally represent the world around us understand language reason about abstract concepts make judgements and decisions and interact with objects and other people Contributions focus on empirical theoretical methodological or modelling issues as well as opinion pieces or contrasting perspectives Topic areas include perception and action social cognition emotion language processing modality specific representations spatial representations gesture atypical embodiment perceptual simulation cognitive modelling and perspectives on the future of embodiment      *The Neuropsychology of Attention* Ronald A. Cohen,2013-12-11 It has been 15

years since the original publication of *Neuropsychology of Attention*. At the time of its publication, attention was a construct that had long been of theoretical interest in the field of psychology and was receiving increased research by cognitive scientists. Yet attention was typically viewed as a nuisance variable, a factor that needed to be accounted for when assessing brain function but of limited importance in its own right. There is a need for a new edition of this book within *Neuropsychology* to present an updated and integrated review of what is known about attention, the disorders that affect it, and approaches to its clinical assessment and treatment. Such a book will provide perspectives for experimental neuropsychological study of attention and also provide clinicians with insights on how to approach this neuropsychological domain.

The accessible writing style and integration of up-to-date material enables students to grasp the salient points and develop a thorough understanding of Tort Law in the Caribbean.
