Ganzha,Ernst W. Mayr,Evgenii V. Vorozhtsov,2012-12-06 The development of powerful computer algebra systems has considerably ex tended the scope of problems of scientific computing which can now be solved successfully with the aid of computers However as the field of applications of computer algebra in scientific computing becomes broader and more complex there is a danger of separation between theory systems and applications For this reason we felt the need to bring together the researchers who now ap ply the tools of computer algebra for the solution of problems in scientific computing in order to foster new and closer interactions CASC 99 is the second conference devoted

to applications of computer al gebra in scientific computing The first conference in this sequence CASC 98 was held 20 24 April 1998 in St Petersburg Russia This volume contains revised versions of the papers submitted by the par ticipants and accepted by the program committee after a thorough reviewing process The collection of papers included in the proceedings covers various topics of computer algebra methods algorithms and software applied to scien tific computing symbolic numeric analysis and solving differential equations efficient computations with polynomials groups matrices and other related objects special purpose programming environments application to physics mechanics optics and to other areas In particular a significant group of papers deals with applications of com puter algebra methods for the solution of current problems in group theory which mostly arise in mathematical physics <u>Computer Algebra in Scientific Computing</u> Vladimir P. computer algebra at the Universitat Linz Gradually a set of course notes has emerged from these activities People have asked me for copies of the course notes and different versions of them have been circulating for a few years Finally I decided that I should really take the time to write the material up in a coherent way and make a book out of it Here now is the result of this work Over the years many students have been helpful in improving the quality of the notes and also several colleagues at Linz and elsewhere have contributed to it I want to thank them all for their effort in particular I want to thank B Buchberger who taught me the theory of Grabner bases nearly two decades ago B F Caviness and B D Saunders who first stimulated my interest in various problems in computer algebra G E Collins who showed me how to compute in algebraic domains and J R Sendra with whom I started to apply computer algebra methods to problems in algebraic geometry Several colleagues have suggested improvements in earlier versions of this book However I want to make it clear that I am responsible for all remaining mistakes   *Optimization Software Guide* Jorge J. More,Stephen J. Wright,1993-01-01 Mathematics of Computing Numerical Analysis   **Computer Science and Scientific Computing** James M. Ortega,2014-05-10 Computer Science and Scientific Computing contains the proceedings of the Third ICASE Conference on Scientific Computing held in Williamsburg Virginia on April l and 2 1976 under the auspices of the Institute for Computer Applications in Systems Engineering at the NASA Langley Research Center The conference provided a forum for reviewing all the aspects of scientific computing and covered topics ranging from computer aided design CAD and computer science technology to the design of large hydrodynamics codes Case studies in reliable computing are also presented Comprised of 13 chapters this book begins with an introduction to the use of the hierarchical family concept in the development of scientific programming systems The discussion then turns to the data structures of scientific computing and their representation and management some important CAD capabilities required to support aerospace design in the areas of interactive support information management and computer hardware advances as well as some computer science developments which may contribute significantly to making such capabilities possible and the use of symbolic computation systems for problem solving in scientific research Subsequent chapters deal with computer applications in astrophysics the possibility of computing turbulence and numerical wind tunnels and the basis for a general purpose program for finite element analysis Software tools for computer graphics are also considered This monograph will be of value to scientists systems designers and engineers and students in computer science who have an interest in the subject of scientific computing   **Control of Nonholonomic Systems: from Sub-Riemannian Geometry to Motion Planning** Frédéric Jean,2014-07-17 Nonholonomic systems are control systems which depend linearly on the control Their underlying geometry is the sub Riemannian geometry which plays for these systems the same role as Euclidean geometry does for linear systems In particular the usual notions of approximations at the first order that are essential for control purposes have to be defined in terms of this geometry The aim of these notes is to present these notions of approximation and their application to the motion planning problem for nonholonomic systems
