*The Emergence of Astrophysics in Asia* Tsuko Nakamura, Wayne Orchiston, 2017-11-03 This book examines the ways in which attitudes toward astronomy in Australia China India Indonesia Japan South Korea New Zealand Taiwan Thailand and Uzbekistan have changed with the times The emergence of astrophysics was a worldwide phenomenon during the late nineteenth and early twentieth centuries and it gradually replaced the older style positional astronomy which focused on locating and measuring the movements of the planets stars etc Here you will find national overviews that are at times followed by case studies of individual notable achievements Although the emphasis is on the developments that occurred around 1900 later pioneering efforts in Australian Chinese Indian and Japanese radio astronomy are also included As the first book ever published on the early development of astrophysics in Asia the authors fill a chronological and technological void Though others have already written about earlier astronomical developments in Asia and about the recent history of astronomy in various Asian nations no one has examined the emergence of astrophysics the so called new astronomy in Asia during the late nineteenth and early twentieth centuries

**Galactic and Extragalactic Infrared Spectroscopy** M.F. Kessler, J.P. Phillips, 2012-12-06 The last major conference on infrared astronomy was the IAU Symposium No 96 in June 1980 Since then the discipline has continued to mature and to contribute to all branches of astrophysics One particular area of growth has been in spectroscopic capabilities at all infrared wavelengths The purpose of the Symposium in Toledo was to review the scientific questions to be addressed via infrared spectroscopy and to provide in the proceedings a useful summary of the field The sensitivity of infrared spectroscopic observations is still generally limited by detector characteristics or by thermal background radiation However in recent years improvements in detector technology together with developments in spectroscopic instrumentation have made possible both quite detailed spectroscopy of the brighter members of many classes of galactic sources and also begun to open up some infrared spectroscopy of extragalactic sources The potential of the field in the next decade or two is clear The IRAS mission has completed one of the pre requisites namely an all sky photometric survey Major space missions utilising cryogenic

infrared telescopes have been approved in Europe ISO and seem likely in the USA SIRTf plans for space submillimeter telescopes are firming up On the ground large telescopes optimized for infrared observations are now in operation at high altitude sites and specialized submillimeter facilities are under construction The particular advantages of planned very large telescopes for infrared observations are widely accepted *Birth and Evolution of Massive Stars and Stellar Groups* Wilfried Boland, Hugo van Woerden, 2012-12-06 Proceedings of a Symposium held in Dwingeloo The Netherlands September 24-26 1984 in honour of Adriaan Blaauw on the occasion of his 70th birthday **Origin and Evolution of Planetary and Satellite Atmospheres** Sushil K. Brush, 1996 *Radio Recombination Lines: 25 Years of Investigation* M.A. Gordon, Roman L. Sorochenko, 2012-12-06 Text no 1 Radio Recombination Lines RRLs discovered in the USSR in 1964 have become a powerful research tool for astronomers Available throughout the radio spectrum these lines carry information regarding the density temperature turbulence and velocity of thermal plasmas Their very existence shows the presence of thermal gas They also can carry information regarding magnetic fields if Zeeman splitting were to be detected Containing the proceedings of an IAU Colloquium celebrating the 25th anniversary of their detection this volume tells us what has happened since It contains the story of the detection of RRLs and reviews of many areas of physics of the interstellar gas from which stars form HII regions excited by newly formed stars planetary nebulae involving dying stars and the structure of our Milky Way and other galaxies reflecting the large scale morphology of the star formation process In addition there is an article describing modern laboratory studies of Rydberg atoms to probe the basic physics of atomic structure and articles describing the theory of collisions and radiation upon Rydberg atoms leading to observable effects to be used as diagnostic tools in astronomy This book focuses on the 25 years of astronomical research with radio recombination lines RRLs since their discovery in 1965 It covers a wide range of topics papers dealing with research into Rydberg atoms both in the laboratory and in the interstellar medium of our galaxy and others papers on the interaction of radiation and atomic systems as well as with the effects of inelastic collisions between these atoms and both ions and electrons It deals with astronomical observations of atoms with diameters ranging from 0.08 to 50  $\mu\text{m}$  a size factor of 625 It deals with RRLs in absorption in emission and as true masers And it deals with plasmas with temperatures ranging from 10 to greater than 104 kelvins and with an even greater range of volume densities Much new work is reported including low frequency RRLs discovered in 1980 and the maser RRLs from the star MWC349 discovered in 1989 The advent of aperture synthesis telescopes and large single element telescopes have made possible RRL studies with high angular resolution The sum total of the work reported here will make the volume a platform from which to search new horizons in RRL research *Far-infrared Line Emission from the Galaxy* Gordon John Stacey, 1985
