

A Synopsis of Human Biochemistry

with Medical Applications

W. C. McMURRAY

B.Sc., Ph.D.

*Professor of Biochemistry
Faculty of Medicine and Dentistry
University of Western Ontario
London, Ontario, Canada*

In contrast to most biochemistry texts, this new book concentrates on a selection of key topical areas with clinical relevance. In concise, easy-to-understand style, it describes the most recent developments in the five basic areas of biochemistry that are of greatest interest to medical students — blood, hormones, nutrition, membranes, and genes.

The first chapter examines the main constituents of the blood, and the chemical properties of blood proteins in relation to their functions in the transport systems and defense mechanisms of the circulation. Chapter 2 gives a survey and critical analysis of human nutritional requirements in health and disease states. Chapter 3 discusses the actions of hormones in target tissues from a molecular point of view, emphasizing the controlling influences upon gene expression and metabolism. Chapter 4 provides an overview of cell membrane properties and our present concepts of the nature of extra-intra-cellular signals. The concluding chapter elaborates upon some key biochemical features of the human genetic apparatus and those factors in the environment that may give rise to genetic diseases or neoplasia.

In sum, its brevity and accessibility make *A SYNOPSIS OF HUMAN BIOCHEMISTRY* useful as a "minitext" or for review . . . for medical students and students in the health sciences as well as residents and interns.
