**Syntactic and Structural Pattern Recognition** Horst Bunke,Alberto Sanfeliu,1990 This book is currently the only one on this subject containing both introductory material and advanced recent research results It presents at one end fundamental concepts and notations developed in syntactic and structural pattern recognition and at the other reports on the current state of the art with respect to both methodology and applications In particular it includes artificial intelligence related techniques which are likely to become very important in future pattern recognition The book consists of individual chapters written by different authors The chapters are grouped into broader subject areas like Syntactic Representation and Parsing Structural Representation and Matching Learning etc Each chapter is a self contained presentation of one particular topic In order to keep the original flavor of each contribution no efforts were undertaken to unify the different chapters with respect to notation Naturally the self containedness of the individual chapters results in some redundancy However we believe that this handicap is compensated by the fact that each contribution can be read individually without prior study of the preceding chapters A unification of the spectrum of material covered by the individual chapters is provided by the subject and author index included at the end of the book

*Pattern Recognition* J.P. Marques de Sá,2012-12-06 Pattern recognition currently comprises a vast body of methods supporting the development of numerous applications in many different areas of activity The generally recognized relevance of pattern recognition methods and techniques lies for the most part in the general trend of intelligent task emulation which has definitely pervaded our daily life Robot assisted manufacture medical diagnostic systems forecast of economic variables exploration of Earth s resources and analysis of satellite data are just a few examples of activity fields where this trend applies The pervasiveness of pattern recognition has boosted the number of task specific

methodologies and enriched the number of links with other disciplines As counterbalance to this dispersive tendency there have been more recently new theoretical developments that are bridging together many of the classical pattern recognition methods and presenting a new perspective of their links and inner workings This book has its origin in an introductory course on pattern recognition taught at the Electrical and Computer Engineering Department Oporto University From the initial core of this course the book grew with the intent of presenting a comprehensive and articulated view of pattern recognition methods combined with the intent of clarifying practical issues with the aid of examples and applications to real life data The book is primarily addressed to undergraduate and graduate students attending pattern recognition courses of engineering and computer science curricula

Pattern Recognition Theory and Applications Pierre A. Devijver,Josef Kittler,2012-12-06 This book is the outcome of a NATO Advanced Study Institute on Pattern Recognition Theory and Applications held in Spa Balmoral Belgium in June 1986 This Institute was the third of a series which started in 1975 in Bandol France at the initiative of Professors K S Fu and A Whinston and continued in 1981 in Oxford UK with Professors K S Fu J Kittler and L F Pau as directors As early as in 1981 plans were made to pursue the series in about 1986 and possibly in Belgium with Professor K S Fu and the present editors as directors Unfortunately Ie sort en decida autrement Professor Fu passed away in the spring of 1985 His sudden death was an irreparable loss to the scientific community and to all those who knew him as an inspiring colleague a teacher or a dear friend Soon after Josef Kittler and I decided to pay a small tribute to his memory by helping some of his plans to materialize With the support of the NATO Scientific Affairs Division the Institute became a reality It was therefore but natural that the proceedings of the Institute be dedicated to him The book contains most of the papers that were presented at the Institute Papers are grouped along major themes which hopefully represent the major areas of contemporary research These are 1 Statistical methods and clustering techniques 2 Probabilistic relaxation techniques 3 From Markovian to connectionist models 4
