That kind of confirmation, to get the same answer by two different calculations, is very helpful. In this case, the method is the same for both calculations, but they are referred to different side combinations. A simpler example where such confirmation can be introduced is in finding an area like that shown at Fig. 98. You can either (left) add the areas of all the pieces, or (right) you can take the area of the enclosing rectangle and subtract the bits that are "missing"; correctly calculated, both arrive at the same answer.

In most books, the study of areas is pursued very formally. An interesting and useful variation can be the comparison of area with perimeter, which is the total length of line needed to enclose a certain area. Let's suppose we fix the perimeter at 60 units and compare the areas different figures will make.

Start with triangles (Fig. 99). First, a triangle with sides 15, 20 and 25 units. This satisfies the Pythagorean requirement for a right triangle: 15 squared is 225, 20 squared is 400 and 25 squared is 625, 225 + 400 = 625, also 15 + 20 + 25 = 60, as required for perimeter. For now, don't bother how we picked these numbers. The area of this triangle is half the rectangle 15 by 20, or 150 square units.

Take triangles of other shapes, for example one with sides 10, 24 and 26 units. This also satisfies the Pythagorean requirement: 10 squared is 100, 24 squared is 576 and 26 squared is 676, 100 + 576 = 676 and 10 + 24 + 26 = 60. The area is half the rectangle 10 by 24, or 120 square units, less than the first one. Note that its sides deviate more than the first one, 10 to 26, as against 15 to 25.

Let's round off the triangular areas with an equilateral (all sides the same) of 20 each side. We need to know the vertical height. The equilateral triangle consists of two right triangles, one side 10 units, the hypotenuse 20 units and what's the other side? Well, if $10^2 + x^2 = 20^2$, then x^2 must be $20^2 - 10^2$, or 300 square units. The square root of 300 is, approximately (we'll show how you find square root later in this chapter) 17.32 units. So the approximate area of the equilateral triangle is the same as the rectangle 10 by 17.32, or half the rectangle 20 by 17.32

   Taking the Mysticism from Mathematics Norman H. Crowhurst,1968   *The Social Relations of Physics, Mysticism, and Mathematics* S. Restivo,2012-12-06 The problems I address in this book are among the least studied in the soci ology of science and knowledge Part I is a critique of the claim that there are parallels between ancient mysticism and modern physics and a sociological analysis of this claim as a strategy in intellectual conflict This study must ultimately be rooted more firmly in a type of sociology of knowledge that is just now beginning to crystallize and which I discuss in Chapter 7 and a sociology of religion that is not so much unknown as underground and timid that is a non worshipful materialist sociology of religion My study of physics mysticism parallelism is a vehicle for exploring epistemic strategies I thus conclude Part I by sketching a materialist emancipatory epistemic strategy My conclusion brings together a number of ideas formulated by myself and others over the past several years but stops short of a systematic synthesis A more integrated and coherent model than what I can sketch here must wait on the results of research now in progress in the critical as opposed to apologetic or worshipful sociology of knowledge   **Math Mystic's Guide to Creative Spirituality** Sarah Voss,2024-04-04 The Math Mystic s Guide to Creative Spirituality is unique provocative engaging and a masterpiece of philosophical and mystical exploration It offers gourmet treats for those with spiritual hunger a feast of innovative perspectives on building social collateral trust forgiveness resilience and intellectual desserts for the mathematically inclined User friendly for the non mathematician the book also provides a smorgasbord of resources for those who want to know more about the math Deeply personal but also scholarly with an unprecedented use of mathematical metaphors this book will appeal to mathematicians scientists teachers philosophers religious educators and spiritual seekers of many persuasions A math professor before becoming a Unitarian Universalist minister the author has compiled herein a lifetime of creative study about the relationship between math and religion She has pioneered ways to use mathematics to help clarify such spiritual ideas as God fairness equality redemption and the nature of things In the process she coined the terms matheology and mathaphor introduced the notion of math sermons and has expanded the concept of moral math This exciting collection of essays with a little poetry as garnish uses math as a language to nourish the spiritual heart of our global society   Mysticism in Modern Mathematics Hastings Berkeley,1910   *Mystical Mathematics applied to Moon-hauling, or the science of non-entities, as fully set forth in the new requisite tables published by the Board of Longitude in four exemplyfying problems, and the correspondence on that subject between Nauticus and the Compiler* ,1786   **The Mathematical Imagination** Matthew Handelman,2019-03-05 This book offers an archeology of the undeveloped potential of mathematics for critical theory As Max Horkheimer and Theodor W Adorno first conceived of the critical project in the 1930s critical theory steadfastly opposed the mathematization of thought Mathematics flattened thought into a dangerous positivism that led reason to the barbarism of World War II The Mathematical Imagination challenges this narrative showing how for other German Jewish thinkers such as Gershom

Scholem Franz Rosenzweig and Siegfried Kracauer mathematics offered metaphors to negotiate the crises of modernity during the Weimar Republic Influential theories of poetry messianism and cultural critique Handelman shows borrowed from the philosophy of mathematics infinitesimal calculus and geometry in order to refashion cultural and aesthetic discourse Drawn to the austerity and muteness of mathematics these friends and forerunners of the Frankfurt School found in mathematical approaches to negativity strategies to capture the marginalized experiences and perspectives of Jews in Germany Their vocabulary in which theory could be both mathematical and critical is missing from the intellectual history of critical theory whether in the work of second generation critical theorists such as J rgen Habermas or in contemporary critiques of technology The Mathematical Imagination shows how Scholem Rosenzweig and Kracauer s engagement with mathematics uncovers a more capacious vision of the critical project one with tools that can help us intervene in our digital and increasingly mathematical present The Mathematical Imagination is available from the publisher on an open access basis

Gender and Medieval Mysticism from India to Europe Alexandra Verini,Abir Bazaz,2023-09-29 This book opens up a dialogue between pre modern women identified as mystics in diverse locations from South Asia to Europe It considers how women from the disparate religious traditions of Hinduism Islam and Christianity expressed devotion in parallel ways The argument is that women s mysticism demands to be compared not because of any essential female experience of the divine but because the parallel positions of marginalization that pre modern women experienced led them to deploy intimate encounters with the divine to speak publicly and claim authority The topics covered range from the Sufi devotional tradition of Sidis Indians of African ancestry to the Bhakti poet M r ba and the nuns of Barking Abbey Collectively the chapters show how mysticism allowed premodern women to speak and act by unsettling traditional gender roles and expectations for religious behavior At the same time as uncovering connections the juxtaposition of women from different traditions serves to highlight distinctive features The book draws on a range of disciplinary expertise and will be of particular interest to scholars of medieval religion and theology as well as history and literary studies **Math is Not Mystical** Jerry Knoelke,2013-11 Everyone needs a better way to understand Math Math Is Not Magic focuses on what the other books are missing Math Is Not Magic provides the universal conceptual process that helps you understand how to solve word problems covering Algebra 1 2 Geometry Trigonometry Calculus Probability and Statistics Math Is Not Magic shows you what to do to solve a word problem and explains how to picture getting to the solution Everyone needs to understand that the mind thinks in pictures and not in words Teaching people to picture how to solve a word problem will not only get them the answer but also help them envision how they got it Amazon com **The Loom of God** Clifford A.
