William. Buchanan, 2013-08-28 Data communications and networks are two of the fastest growing technological areas This is because there is an almost unlimited demand for information transfer Increased transfer rates give the opportunity for better applications and improved opportunities These improvements lead to an increased demand for communications and so on Most people in business would now agree that networks and data communications makes their work easier and increases their productivity Communication systems now cover many important areas of modern life Without them there would be no ATM bank services no Internet no video conferencing and no electronic mail Ask most organizations about what their most important resources were and many would say that their communications infrastructure was the most important Without it they could not effectively communicate and business needs good and reliable communications Within a few years the most important component in a computer system will not be the processor or the amount of memory it has it will be its link to the network Computers systems will become just another part of a local and a global communications network It must also be said that communications is making the world a smaller place It is reducing the influence that governments and organizations have on our life and makes it much easier for us search and retrieve information

Fundamentals of Data Communication Networks Oliver C. Ibe, 2017-11-29 What every electrical engineering student and technical professional needs to know about data exchange across networks While most electrical engineering students learn how the individual components that make up data communication technologies work they rarely learn how the parts work together in complete data communication networks In part this is due to the fact that until now there have been no texts on data communication networking written for undergraduate electrical engineering students Based on the author s years of classroom experience Fundamentals of Data Communication Networks fills that gap in the pedagogical literature providing readers with a much needed overview of all relevant aspects of data communication networking addressed from the perspective of the various technologies involved The demand for information exchange in networks continues to grow at a staggering rate and that demand will continue to mount exponentially as the number of interconnected IoT enabled devices grows to an expected twenty six billion by the year 2020 Never has it been more urgent for engineering students to understand the fundamental science and technology behind data communication and this book the first of its kind gives them that understanding To achieve this goal the book Combines signal theory data protocols and wireless networking concepts into one text Explores the full range of issues that affect common processes such as media downloads and online games Addresses services for the network layer the transport layer and the application layer Investigates multiple access schemes

and local area networks with coverage of services for the physical layer and the data link layer Describes mobile communication networks and critical issues in network security Includes problem sets in each chapter to test and fine tune readers understanding Fundamentals of Data Communication Networks is a must read for advanced undergraduates and graduate students in electrical and computer engineering It is also a valuable working resource for researchers electrical engineers and technical professionals *Data Communications and Computer Networks* Michael Duck, Richard Read, 2003
