Culshaw, 2005 Sinkholes and Subsidence will provide a twenty first century account of how the various subsidence features in carbonate and evaporite rocks cause problems in development and construction in our living environment The authors consider the various methods used in site investigations both direct and indirect to locate the features associated with these associated hazards and risks highlighting the value of hazard mapping Various ground improvement techniques such as grouting and the special types of foundation structures which deal with these problems are covered towards the end of the book This book is supplemented with a wealth of actual case studies and solutions written by invited experts TOC Introduction Classification and nomenclature Failures in rock collapse and caprock sinkholes Failures in soil subsidence sinkholes Buried sinkholes Induced sinkholes Collapses in basalt lavas Investigation direct methods geophysical methods site characterization hazard maps Engineering and remediation foundations reservoirs dams ground treatment Case histories

Division of Geology, 2001 **The Science of a Sink Hole** Robin Koontz, 2015-08-01 This book discusses the science behind sinkholes The chapters examine historical sinkholes describe environmental factors that cause sinkholes and explain how scientists respond to these disasters Diagrams charts and photos provide opportunities to evaluate and understand the scientific concepts involved Karst Hydrogeology, Geomorphology and Caves Jo De Waele, Francisco Gutierrez, 2022-06-21 Karst Hydrogeology Geomorphology and Caves A Comprehensive Resource Covering All Aspects of Karst Hydrogeology Geomorphology and Caves This essential book covers all physical chemical and geological aspects of karst science It reviews current knowledge on hydrogeology geomorphology and caves in karst based on the vast existing literature and investigations carried out by the authors worldwide The different topics are profusely illustrated with color figures and images from all continents and climates showing the scientific and aesthetic appeal of karst environments The book covers in a systematic way the significant features of karst rocks the chemistry and kinetics of their dissolution the rate and distribution of karst denudation the unique hydrogeology of karst terrains the landforms endemic to karst the morphology of caves and their diverse sedimentary records and the multiple processes that lead to the formation of underground voids Overall the work reflects the increasing recognition of karst as a fundamental part of the Earth s dynamic systems and helps readers understand this multidisciplinary field from a holistic and nuts and bolts perspective Some of the ideas discussed within the book include How karst is gaining importance for human development because of its valuable resources groundwater and associated environmental problems impacts and hazards The enormous technological developments achieved in recent years Recent major breakthroughs in the field and their influence on other scientific disciplines The

Geomorphological Hazards and Disaster Prevention Irasema Alcántara-Ayala,Andrew S. Goudie,2010-03-04 Human activities have had a huge impact on the environment and landscape through industrialisation and land use change leading to climate change deforestation desertification land degradation and air and water pollution These impacts are strongly linked to the occurrence of geomorphological hazards such as floods landslides snow avalanches soil erosion and others Geomorphological work includes not only the understanding but the mapping and modelling of Earth s surface processes many of which directly affect human societies In addition geomorphologists are becoming increasingly involved with the

dimensions of societal problem solving through vulnerability analysis hazard and risk assessment and management The work of geomorphologists is therefore of prime importance for disaster prevention An international team of geomorphologists have contributed their expertise to this volume making this a scientifically rigorous work for a wide audience of geomorphologists and other Earth scientists including those involved in environmental science hazard and risk assessment management and policy
