

Diseases of Muscular System

Sprains

Ankle ligament ruptures are typically the result of a sudden motion of the foot. Future discomfort and swelling could be avoided with the use of rehabilitation treatments.

Strain

A pulled bicep is the result of overstretching and tearing the tendons and/or muscle fibres in the biceps. Pain and edema are possible complications.

Bruise

A bruise is the medical word for a cut or rupture in the muscular tissue. Symptoms include swelling and a rise in pressure around the muscle that has been injured.

Cancer Of The Muscle

This disorder, which can impair the calf muscle, is extremely uncommon. Cancer of the calf muscles is called sarcoma in the medical community.

The NeuroMuscular System: From Earth to Space
Life Science Dieter Blottner, Michele Salanova, 2014-11-25 The book provides fundamental new insights in the structure and function of the healthy NeuroMuscular system Recent findings suggest that the musculoskeletal system that supports movement control on Earth is controlled by unique principles of structural biochemical and molecular characteristics Mechanical loading by working against normal gravity helps to support principal structures in bone muscle and associated subcellular scaffold components Disuse or immobilization of the body in bed rest on Earth or in microgravity in Space result in considerable loss of bone muscle and force with downregulation of neuromuscular activity resulting in impaired performance control The goal is to develop exercise prescriptions to maintain postural control in normal life aging and rehabilitation on Earth as well as for an adequate human performance management in Space
