Information Production Nilgun B. Harmancioglu, S.D. Ozkul, O. Fistikoglu, Paul Geerders, 2003-10-31 This book presents the

proceedings and the outcomes of the NATO Advanced Research Workshop ARW on Integrated Technologies for

Environmental Monitoring and Information Production which was held in Marmaris Turkey between September 10 14 200 I

With the contribution of 45 experts from 20 different countries the ARW has provided the opportunity to resolve the basic

conflicts that tend to arise between different disciplines associated with environmental data management and to promote

understanding between experts on an international and multidisciplinary basis The prevailing universal problem in

environmental data management EDM systems is the significant incoherence between data collection procedures and the

retrieval of information required by the users This indicates the presence of problems still encountered in the realization of 1

delineation of objectives constraints institutional aspects of EDM 2 design of data collection networks 3 statistical sampling 4

physical sampling and presentation of data 5 data processing and environmental databases 6 reliability of data 7 data

analysis and transfer of data into information and 8 data accessibility and data exchange at local regional and global scales

Further problems stem from the lack of coherence between different disciplines involved in EDM lack of coordination

between responsible agencies on a country basis and lack of coordination on an international level regarding the basic

problems and relevant solutions that should be sought
