Sandford, 2012 Cold matters distills the scientific complexities of snow ice water and climate and presents the global implications of research put forth and funded by the Canadian Foundation for Climate and Atmospheric Sciences This timely book gives the concerned reader an opportunity to take part in the conversation about our global environment in the end Cold matters will change the way you think about ice and snow *A Biogeoscience Approach to Ecosystems* Edward A. Johnson, Yvonne E. Martin, 2016-10-13 Biogeoscience is a rapidly growing interdisciplinary field that aims to bring together biological and geophysical processes This book builds an enhanced understanding of ecosystems by focusing on the integrative connections between ecological processes and the geosphere hydrosphere and atmosphere Each chapter provides studies by researchers who have contributed to the biogeoscience synthesis presenting the latest research on the relationships between ecological processes such as conservation laws and heat and transport processes and geophysical processes such as hillslope fluvial and aeolian geomorphology and hydrology Highlighting the value of biogeoscience as an approach to understand ecosystems this is an ideal resource for researchers and students in both ecology and the physical sciences *Alpine Plant Life* Christian Körner, 2021-03-31 This book is a completely revised substantially extended treatment of the physical and biological factors that drive life in high mountains The book covers the characteristics of alpine plant life alpine climate and soils life under snow stress tolerance treeline ecology plant water carbon and nutrient relations plant growth and productivity developmental processes and two largely novel chapters on alpine plant reproduction and global change biology The book explains why the topography driven exposure of plants to dramatic micro climatic gradients over very short distances causes alpine biodiversity to be particularly robust against climatic change Geographically this book draws on examples from all parts of the world including the tropics This book is complemented with novel evidence and insight that emerged over the last 17 years of alpine plant research The number of figures mostly in color nearly doubled with many photographs providing a vivid impression of alpine plant life worldwide Christian K rner was born in 1949 in Austria received his academic education at the University of Innsbruck and was full professor of Botany at the University of Basel from 1989 to 2014 As emeritus Professor he is continuing alpine plant research in the Swiss Alps **Encyclopedia of Ecology** Brian D. The Biology of Polar Regions D. N. Thomas, G. E. Fogg, P. Convey, C. H. Fritsen, J. -M. Gili, R. Gradinger, J. Laybourn-Parry, K. Reid, D. W. H. Walton, 2008-03-20 There is now an increased awareness of the importance of polar regions in the Earth system as well as their vulnerability to anthropogenic derived change including of course global climate change This new edition offers a concise but comprehensive introduction to polar ecology and has been thoroughly revised and updated throughout providing expanded coverage of marine ecosystems and the impact of humans It incorporates a detailed comparison of the Arctic and Antarctic systems with a particular emphasis on the effects of climate change and describes marine freshwater glacial and terrestrial habitats This breadth of coverage is unique in the polar biology literature As with other titles in the *Biology of Habitats* Series particular emphasis is placed on the organisms that dominate these extreme environments although pollution conservation and experimental aspects are also considered This accessible text is suitable for both senior undergraduate and graduate students taking courses in polar ecology often as part

of a wider marine biology degree programme It will also be of value and use to the many professional ecologists and conservation biologists requiring a concise overview of the topic

Historical Climate Variability and Impacts in North America Lesley-Ann Dupigny-Giroux, Cary J.

Mock,2009-09-18 Climatologists with an eye on the past have any number of sources for their work from personal diaries to weather station reports Piecing together the trajectory of a weather event can thus be a painstaking process taking years and involving real detective work Missing pieces of a climate puzzle can come from very far afield often in unlikely places In this book a series of case studies examine specific regions across North America using instrumental and documentary data from the 17th to the 19th centuries Extreme weather events such as the Sitka hurricane of 1880 are recounted in detail while the chapters also cover more widespread phenomena such as the collapse of the Low Country rice culture The book also looks at the role of weather station histories in complementing the instrumental record and sets out the methods that involve early instrumental and documentary climate data Finally the book s focus on North America reflects the fact that the historical climate community there has only grown relatively recently Up to now most such studies have focused on Europe and Asia The four sections begin with regional case studies and move on to reconstruct extreme events and parameters This is followed by the role of station history and lastly methodologies and other analyses The editors aim has been to produce a volume that would be instrumental in molding the next generation of historical climatologists They designed this book for use by general researchers as well as in upper level undergraduate or graduate level courses

Storm Warning Robert William Sanford,2015 Human beings and industrial based society are changing the composition of our

planet's atmosphere and causing it to warm at an unnatural and oftentimes astonishing rate. Much of that warmth is being absorbed by water which is causing an acceleration in the rate and manner in which water moves through the global hydrological cycle. A warmer atmosphere carries more water vapor which means as temperatures continue to rise storms will be more intense, last longer, and cause more damage to our towns, cities, and vital infrastructure. On the other side of the hydro climate coin, we can also expect deeper, more persistent, and damaging droughts throughout the world, resulting in dramatic losses, difficult economic outcomes, and fundamental alterations to landscape. This highly considered, accessible, and readable book explains how changes in the water cycle have already begun to affect how we think about and value water security and climate stability, and what we can do to ensure a sustainable future for our children and grandchildren.

Arctic Ecology

David N. Thomas, 2021-01-26. The Arctic is often portrayed as being isolated, but the reality is that the connectivity with the rest of the planet is huge, be it through weather patterns, global ocean circulation, and large scale migration patterns, to name a few. There is a huge amount of public interest in the changing Arctic, especially in terms of the rapid changes taking place in ecosystems and exploitation of resources. There can be no doubt that the Arctic is at the forefront of the international environmental science agenda, both from a scientific aspect and also from a policy/environmental management perspective. This book aims to stimulate a wide audience to think about the Arctic by highlighting the remarkable breadth of what it means to study its ecology. Arctic Ecology seeks to systematically introduce the diverse array of ecologies within the Arctic region. As the Arctic rapidly changes, understanding the fundamental ecology underpinning the Arctic is paramount to understanding the consequences of what such change will inevitably bring about. Arctic Ecology is designed to provide graduate students of environmental science, ecology, and climate change with a source where Arctic ecology is addressed specifically, with issues due to climate change clearly discussed. It will also be of use to policy makers, researchers, and international agencies who are focusing on ecological issues and effects of global climate change in the Arctic. About the Editor: David N. Thomas is Professor of Arctic Ecosystem Research in the Faculty of Biological and Environmental Sciences, University of Helsinki. Previously, he spent 24 years in the School of Ocean Sciences, Bangor University, Wales. He studies marine systems with a particular emphasis on sea ice and land-coast interactions in the Arctic and Southern Oceans, as well as the Baltic Sea. He also edited a related book, *Sea Ice*, 3rd Edition, 2017, which is also published by Wiley-Blackwell.

Snowshoe Country Thomas M. Wickman, 2018-09-20. An environmental and cultural history of winter in the colonial Northeast, examining indigenous and settler knowledge of life in the cold.
