Social And Economic Management In The Competitive Society:

Social and Economic Management in the Competitive Society Edgar Krau,1997-12-31 In many countries of the world there is a growing feeling of uneasiness about the economic situation and its related social consequences Every day the newspapers tell us that the recession is over but we see only that scores of organizations go bankrupt while others are struggling hard to stay in business that many people have lost their jobs but welfare measures are being reduced or abolished altogether By now we should have become aware that our society is not facing temporary market difficulties but a much deeper and wider crisis with only one root in worldwide economic developments while other roots are social and psychological in nature These factors are intertwined and therefore the answer to the crisis cannot merely be an economic cost benefit analysis of organizational management Sociocultural factors participate in the economic process even at the level of individual organizations and what happens in them has backlash influences on the entire society Therefore the problem is not the management of the individual organization but the macroconception of management which in the Western world of today separates the economic aspects from the social ones and the individual organizations from society Social and Economic Management in the Competitive Society begins by analyzing the management models of today to determine which characteristics yield the best results on the economic and social levels The second step is to indicate the necessary changes of managerial thinking and acting in order to boost economic results with reasonable profits while minimizing social costs Finally the potential ramifications of such changes are explored

A. Mashelkar,2009-01-01 It is scarcely five years since the first edition of this book a milestone in the strategy

oriented approach to intellectual property at the global level appeared and was quickly and widely welcomed as virtually an intellectual property agenda for the 21st century. This second edition includes a judicious update of the original data and analysis in light of the significant movement forward that has taken place over the past few years in many of the critical areas that shape the competitive strategies in the use of IP Rights. The authors have lost none of their conviction of the necessity to enhance awareness of the techno-economic effects of intellectual property rights protection on enterprise competitiveness and national growth and development. The book provides a panoramic but detailed view of the world and its intellectual property system that embraces socioeconomic, cultural, and technological development in its scope, clarifying the pitfalls and challenges that the system presents even as it promises to improve the quality of life on our planet. The authors, both internationally respected and honoured for their work in elucidating the economic necessity of an intellectual property system that can inspire universal confidence, emphasize the imperative of international competitiveness in knowledge-based technology. In their orderly presentation of the key issues that promote the real benefits not yet achieved of a truly effective regime of intellectual property rights, they discuss such factors as the following: the use of intellectual property as an integral part of business strategy; optimal utilization of intellectual property assets; the incentives and rewards of and fair play and in the marketplace; facilitation of widespread diffusion and adoption of the fruits of creativity and innovation; the crucial role of small and medium enterprises; the need at every level for deliberate incentive policies that encourage creativity and invention; strict enforcement of intellectual property rights; creating linkages between intellectual property stakeholders and use of patent information for forecasting technology trends. These issues and recommendations and more are all discussed in a framework that highlights each of the major areas of knowledge in which intellectual property rights are most insistently invoked today, such as the digital economy, e-commerce, Internet domain names, database protection, protection of plant varieties, design of integrated circuits, biotechnology, and nanotechnology. Ultimately, however, this outstanding work and its most important contribution lies in its vision of the organic corporation of governments, institutions, supranational organizations, multinational corporations, small and medium enterprises, and civil society as they collectively fashion a 21st century in which creativity and innovation are enabled to convert knowledge into wealth and social good. For this reason, as well as for its richly detailed treatment of trends and current reality in the field, this new updated edition of *Intellectual Property and Competitive Strategies in the 21st Century* will continue to be read and put to good use by business people, international lawyers, government officials, and interested academics in all parts of the world.

Roberts, 2022-12-09 First published in 1985 Industrial Relations in Europe examines the development of trade unions and their relations with the employers and employers organisations in a number of Western European countries in the 1980s The shared characteristics of these systems are common heritage of political democracy market economies the right of employers to manage the business for which they are responsible and the right of employees to belong to unions which are free to bargain and to seek political goals which will advance the interests of their members With case studies from Denmark Germany France Great Britain Norway etc the volume showcases the major structural changes brought about by technological economic and social factors which had significant implications for trade unions and traditional patterns of industrial relations A major response was the erosion of centralized processes of decision making and a return to the individual local initiative and an increased interest in entrepreneurship This book is a must read for scholars of political economy industrial economy and economics in general

The Last Half-Century Morris Janowitz, 1978 The Last Half Century represents the culmination of a lifetime of scholarship by Morris Janowitz In this comprehensive and systematic analysis of the major trends in American society during the past fifty years he probes the weakening of popular party affiliations and the increased inability of elected representatives to rule Centering his work on the crucial concept of social control Janowitz orders and assesses a vast amount of empirical research to clarify the failure of basic social institutions to resolve our chronic conflicts For Janowitz social control denotes a society's capacity to regulate itself within a moral

framework that transcends simple self interest He poses urgent questions Why has social control been so drastically weakened in our advanced industrial society And what strategies can we use to strengthen it again The explanation rests in part on the changes in social structure which make it more and more complicated for citizens to calculate their political self interest At the same time complex economic and defense problems also strain an already overburdened legislative system making effective responsive political rule increasingly difficult Janowitz concludes by assessing the response of the social sciences to the pressing problem of social control and asserts that new forms of citizen participation in the government must be found

Competition Stefan Arora-Jonsson, Nils Brunsson, Raimund Hasse, Katarina Lagerström, 2021 The spread of competition into all areas of society is one of the master trends of modern society Yet social scientists have played a surprisingly modest role in the analysis of its implications as the discussion of competition has largely been confined to the narrow context of economic markets This book opens up competition for the study of social scientists The central message of the book is that competition seems ubiquitous but it should not be taken for granted or be naturalized as an inevitable aspect of human existence Its emergence maintenance and change are based on institutions and organizational efforts and a central challenge for social science is to learn more about these processes and their outcomes With the use of a novel definition of competition more fundamental questions can be addressed than merely whether or not competition works How is competition constructed and by whom Which institutional and organizational foundations need to be considered Which behaviours result from competition What are its consequences Can competition be removed And how do these factors vary with the object of competition be it money attention status or other scarce and desired objects The chapters in the book investigate these and more questions in studies of competition among and within schools universities multinational corporations auditors waste disposal firms and fashion designers and users The chapters are written by scholars from several social science fields management organization studies sociology anthropology and education Publisher's website
