Sound Symbolism Leanne Hinton, Johanna Nichols, John J. Taylor, 2015-06-25 This handbook addresses words in all their multifarious aspects and brings together scholars from every relevant discipline to do so The many subjects covered include word frequencies sounds and sound symbolism the structure of words taboo words lexical borrowing words in dictionaries and thesauri word origins and change place and personal names nicknames taxonomies word acquisition and bilingualism words in the mind word disorders and word games puns and puzzles Words are the most basic of all linguistic units the aspect of language of which everyone is likely to be most conscious A new word that makes it into the OED is prime news when baby says its first word its parents reckon it has started to speak knowing a language is often taken to mean knowing its words and languages are seen to be related by the similarities between their words Up to the twentieth century linguistic description was mainly an account of words and all the current subdivisions of linguistics have something to say about them A notable feature of human languages is the sheer vastness of their word inventories and scholars and writers have sometimes deliberately increased the richness of their languages by coining or importing new items into their word hoards The book presents scholarship and research in a manner that meets the interests of students and professionals and satisfies the curiosity of the educated reader Rhyme over Reason Réka Benczes, 2019-01-31 We are fascinated by what words sound like This fascination also drives us to search for meaning in sound thereby contradicting the principle of the arbitrariness of the linguistic sign Phonesthemes onomatopoeia or rhyming compounds all share the property of carrying meaning by virtue of what they sound like simply because language users establish an association between form and meaning By drawing on a wide array of examples ranging from conventionalized words and expressions to brand names and slogans this book offers a comprehensive account of the role that sound symbolism and rhyme alliteration plays in English and by doing so advocates a more relaxed view of the category morpheme that is able to incorporate less regular word formation processes *Linguistic Theories of Humor* Salvatore Attardo, 1994 No detailed description available for Linguistic Theories of Humor Uto-Aztecan Eugene H. going to answer the question whether non synaesthetic people are able to connect the sense of taste the auditive the visual and the tactile sense with each other While most of the synaesthesia studies focus on visual stimuli like colours or graphemes this paper is mainly concerned with the auditive sense represented by phonemes However since the visual sense is one of the most important senses for humans and for the sake of comparability visual stimuli in form of colours and different shapes are also included in the questionnaire In order to give the reader a proper overview of the topic a short literature review which gives information about the literature that is the base of the paper can be found in chapter 2 Subsequently in chapter 3 one finds a description of the methodology on which the research based on the evaluation of data taken from a questionnaire The presentation of the results of this research follows in chapter 4 as well as a detailed discussion of these results which can be found in chapter 5 right in front of the conclusion in chapter 6 Everyone is aware of the fact that the sense of taste is strongly connected with the sense of smell People who are due to special circumstances not able to smell properly often lose their appetite because they cannot really taste the food But what about the other senses Is tasting also connected with the visual or the auditive sense or are there in general connections between other senses than smell and taste People in a special neurological condition called synaesthesia are able to draw these connections Ramachandran and Hubbard describe synaesthesia as a condition in which an otherwise normal person experiences sensations in one modality when a second modality is stimulated Ramachandran Hubbard 2001 4 This can become obvious in many different most abstract ways like the matching of graphemes letters or numbers with special colours colours with sounds or even with tactile conditions But experiments in the past for example by Wolfgang Köhler have shown that not only synaesthetic persons but everyone can be able to draw a couple of sensual connections inside the brain But is this the case for any connection between randomly chosen senses or only for special ones
