

# Stochastic Hydrology

- Hydrological processes exhibit variations in both space and time. As hydrological models are simplified versions of reality, they produce predictions or estimates of hydrological variables (e.g. runoff, hydraulic head, concentration) that are inherently erroneous.
- Stochastic hydrology is mainly concerned about presenting and assessing uncertainty in hydrological analysis, modeling and forecasting.

**Stochastic Processes in Hydrology** Vujica M. Yevjevich, 1972      *Stochastic Hydrology and its Use in Water Resources Systems Simulation and Optimization* J.B. Marco, R. Harboe, J.D. Salas, 2012-12-06 Stochastic hydrology is an essential base of water resources systems analysis due to the inherent randomness of the input and consequently of the results. These results have to be incorporated in a decision making process regarding the planning and management of water systems. It is through this application that stochastic hydrology finds its true meaning; otherwise it becomes merely an academic exercise. A set of well known specialists from both stochastic hydrology and water resources systems present a synthesis of the actual knowledge currently used in real world planning and management. The book is intended for both practitioners and researchers who are willing to apply advanced approaches for incorporating hydrological randomness and uncertainty into the simulation and optimization of water resources systems. **Stochastic hydrology** is a basic tool for water resources systems analysis due to inherent randomness of the hydrologic cycle. This book contains actual techniques in use for water resources planning and management incorporating randomness into the decision making process. Optimization and simulation: the classical systems analysis technologies are revisited under up to date statistical hydrology findings backed by real world applications.

These symposia were chosen to reflect Professor Joshi's research interests as well as areas of expertise in statistical science among faculty in the Departments of Statistical and Actuarial Sciences, Economics, Epidemiology and Biostatistics, and Philosophy. symposia the six volumes which comprise the Joshi Festschrift have arisen The 117 articles in this work reflect the broad interests and high quality of research of those who attended our conference We would like to thank all of the contributors for their superb cooperation in helping us to complete this project Our deepest gratitude must go to the three people who have spent so much of their time in the past year typing these volumes Jackie BeU Lise Constant and Sandy Tamowski This work has been printed from camera ready copy produced by our Vax 785 computer and QMS Lasergraphix printers using the text processing software TEX At the initiation of this project we were neophytes in the use of this system Thank you J ackie Lise and Sandy for having the persistence and dedication needed to complete this undertaking

**Stochastic Processes in Water Resources Engineering** Lars Gottschalk, Gunnar Lindh, Lennart De Maré, 1977 Stochastic Processes for Water Scientists Robin T. Clarke, 1998-10-15 The discipline of Stochastic Processes is usually treated as a branch of mathematics and there are plenty of books for mathematicians on the subject Equally there are very many books both for statisticians and environmental scientists on Time Series Analysis analysing the structure of data sequences where measurements are made at equal time intervals and are free from intermittent behaviour But this book deals with the analysis of events which occur intermittently in time and space through a very wide range of examples drawn from many areas of environmental science in which the role of water is central the book shows how the same analytical procedures can be applied to very many different problems The book s many examples include analysis of time intervals between el Ni o events frequency of dry spells the relation between heavy rainfall and flooding occurrences of gravel disturbance in upland trout streams which damages trout spawn deposits and the cellular structure of rainfall The book does not aim to be an exhaustive treatment of all possible applications of stochastic process models in the environmental sciences but should be regarded as a source book Its aim is to encourage students and research workers to see how environmental problems can be put into a probabilistic framework and to draw their attention to analogous problems and solutions in other fields of environmental science in which water and the transport of material by water is an essential characteristic

**Stochastic and Statistical Methods in Hydrology and Environmental Engineering** Keith W. Hipel, 2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to obtain a better understanding of environmental problems so that effective remedial action can be taken Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions stochastic and statistical models have major roles to play in the protection and restoration of our natural environment Consequently the main objective of this edited volume is to present some of the most up to date and promising approaches to stochastic and statistical modelling especially with respect to groundwater and surface water applications Contents As shown in the Table of Contents the book is subdivided into the following main parts GENERAL ISSUES PART I PART II GROUNDWATER PART III SURFACE WATER PART IV STOCHASTIC OPTIMIZATION PART V MOMENT ANALYSIS PART VI OTHER TOPICS Part I raises some thought provoking issues about

probabilistic modelling of hydro logical and environmental systems The first two papers in Part I are in fact keynote papers delivered at an international environmetrics conference held at the University of Waterloo in June 1993 in honour of Professor T E Unny In his keynote pa per Dr S J Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering Additionally Dr Burges stresses the need for developing a sound scien tific basis for the field of hydrology Professor P E
