Exciting New Publication Details Our Geothermal Heritage Through the Ages and Around the World

A new and exciting book is here off the press—with a fresh but timeless topic—the history of mankind living on a geothermal planet. Published by the Geothermal Resources Council and the International Geothermal Association, *Stories from a Heated Earth: Our Geothermal Heritage*, is neither a volume about nor a technical treatise. Instead, its focus is on people, and how geothermal phenomena have affected cultures around the world.

Stories from a Heated Earth painstakingly compiled and edited by Raffaele Cardillo (geothermal consultant-Italy), Susan Hodgson (California Division of Oil, Gas & Geothermal Resources) and John Lund/Oregon Institute of Technology Geo-Hot Center's. Created to collect, preserve, interpret and distribute global geothermal history prior to the Industrial Revolution, the 588-page volume with 212 photographs and illustrations is a unique amalgamation of both fact and fiction—real and imaginary accounts of our geothermal heritage unlike anything ever published before.

Covering more than 25 centuries, this beautifully crafted paperback book is written in an easy, nontechnical style designed for broad appeal. The 47 international authors of *Stories from a Heated Earth* found the historical information presented by this superb volume in the works of archaeologists, historians, geographers, anthropologists, scientists and engineers. Inspiration flowed from artists, photographers, poets, philosophers, and literary figures—with geothermal quotations from Chinese and Japanese poets, Homer, Shakespeare, Pushkin, Herman Melville, Mark Twain and Edgar Allan Poe.

In addition, *Stories from a Heated Earth* includes interesting tales and practices from ancient manuscripts and the oral tra-

dition, never before recorded. And antique quotations in over 50 languages were extracted for the book from pottery, drawings, maps, votive statues, shrines, oracles, myths and legends. All contribute to the fascinating reading offered within the covers of this engaging, "must have" addition to both geothermal and historical libraries.

From the dawn of history, people have been entranced by the wonder and beauty of geothermal manifestations. Prehistoric tribes and civilizations in antiquity considered the "Fire of the Earth" as a gift bestowed

by the gods for the benefit of mankind. Hot springs and fumaroles were described as *Flumen Tartar* ("Great Mystery") by the Ancient Greeks, *Flumen* ("river") by the Romans, *Flumen* ("river") by the Chinese, *Flumen* ("river") by the Japanese, *Flumen* ("river") by the Incas, *Flumen* ("river") by the Aztecs. These beliefs, ingrained in popular customs, traditions, religious folk-inspired rituals, were handed down through hundreds of generations and still influence our customs and thought today.

With their awe-inspiring beauty and sometimes destructive power forever commanding our attention, volcanoes have inspired religious practices, provided for the

Lund, 1999 **Geothermal Water Management** Jochen Bundschuh, Barbara Tomaszewska, 2018-03-12 Availability of and adequate accessibility to freshwater and energy are two key technological and scientific problems of global significance At the end of the 20th century the deficit of water for human consumption and economic application forced us to focus on rational use of resources Increasing the use of renewable energy sources and improving energy efficiency is a challenge for the 21st century Geothermal energy is heat energy generated and stored in the Earth accumulated in hydrothermal systems or in dry rocks within the Earth's crust in amounts which constitute the energy resources The sustainable management of geothermal energy resources should be geared towards optimization of energy recovery but also towards rational management of water resources since geothermal water serves both as energy carrier and also as valuable raw material Geothermal waters depending on their hydrogeothermal characteristics the lithology of the rocks involved the depth at which the resources occur and the sources of water supply may be characterized by very diverse physicochemical parameters This factor largely determines the technology to be used in their exploitation and the way the geothermal water can be used This book is focused on the effective use of geothermal water and renewable energy for future needs in order to promote modern sustainable and effective management of water resources The research field includes crucial new areas of study an improvement in the management of freshwater resources through the use of residual geothermal water a review of the technologies available in the field of geothermal water treatment for its re use for energetic purposes and freshwater production and the development of balneotherapy The book is aimed at professionals academics and decision makers worldwide water sector representatives and administrators business enterprises specializing in renewable energy management and water treatment working in the areas of geothermal energy usage water resources water supply and energy planning This book has the potential to become a standard text used by educational institutions and research development establishments involved in the geothermal water management *Stories from the Deep Earth* Geoffrey F. Davies, 2022-01-03 Plate tectonics can drift continents and push up mountains but what drives the plates This is an insider's account of how we answered questions posed over two centuries ago and completed geology's quest for a driving mechanism Forging through confusing evidence apparent contradictions and raging debates we arrived at not one but two mechanisms sinking plates and rising plumes Myth and Geology Luigi Piccardi, W. Bruce Masse, 2007 This book is the first peer reviewed collection of papers focusing on the potential of myth storylines to yield data and lessons that are of value to the geological sciences Building on the nascent discipline of geomythology scientists and scholars from a variety of disciplines have contributed to this volume The geological hazards such as earthquakes tsunamis volcanic eruptions and cosmic impacts that have given rise to myths are considered as are the sacred and cultural values associated with rocks fossils geological formations and landscapes There are also discussions
