Stories From The Skeleton Behavioral Reconstruction In Human Osteology:

Stories from the Skeleton Robert Jurmain, 2013-09-05 This volume raises central theoretical issues regarding behavioural reconstruction in human osteological research Because behavioural reconstructions have become increasingly common especially within paleopathology it is time to review the scientific basis for such an approach For example osteological scenarios seeking to link the onset of such skeletal conditions as osteoarthritis dental disease and trauma with specific behaviours in past populations are critically examined Questions are also raised as to the scientific rigor of such hypotheses the ethnohistorical or other evidence used to support them and ultimately the soundness of such claims In addition commentary is included that broadens the scope to include anthropology and explains the utility and limitations of behavioural reconstructions in paleoanthropology and the biocultural perspective as it is used in contemporary anthropology

The Routledge Handbook of the Bioarchaeology of Human Conflict Christopher Knüsel, Martin Smith, 2013-12-17 If human burials were our only window onto the past what story would they tell Skeletal injuries constitute the most direct and unambiguous evidence for violence in the past Whereas weapons or defenses may simply be statements of prestige or status and written sources are characteristically biased and incomplete human remains offer clear and unequivocal evidence of physical aggression reaching as far back as we have burials to examine Warfare is often described as senseless and as having no place in society Consequently its place in social relations and societal change remains obscure The studies in The Routledge Handbook of the Bioarchaeology of Human Conflict present an overview of the nature and development of human conflict from prehistory to recent times as evidenced by the remains of past people themselves in order to explore the social contexts in which such injuries were inflicted A broadly chronological approach is taken from prehistory through to recent

conflicts however this book is not simply a catalogue of injuries illustrating weapon development or a narrative detailing progress in warfare but rather provides a framework in which to explore both continuity and change based on a range of important themes which hold continuing relevance throughout human development Homines, Funera, Astra 3-4: The Multiple Faces of Death and Burial Raluca Kogălniceanu, Mihai Gligor, Andrei Soficaru, Susan Stratton, 2023-07-27 Papers focus on two central topics regarding past funerary behaviour in Central and South Eastern Europe cremation and cause and time of death Six studies relate to prehistory from the Neolithic to Iron Age Three more papers focus on the Roman Age and the other four are dedicated to the Medieval period New Directions in the Skeletal Biology of Greece Lynne Alison Schepartz, Sherry C. Zuckerman, Debra L. Martin, 2016-10-17 Biocultural or biosocial anthropology is a research approach that views biology and culture as dialectically and inextricably intertwined explicitly emphasizing the dynamic interaction between humans and their larger social cultural and physical environments The biocultural approach emerged in anthropology in the 1960s matured in the 1980s and is now one of the dominant paradigms in anthropology particularly within biological anthropology This volume gathers contributions from the top scholars in biocultural anthropology focusing on six of the most influential productive and important areas of research within biocultural anthropology These are critical and synthetic approaches within biocultural anthropology biocultural approaches to identity including race and racism health diet and nutrition infectious disease from antiquity to the modern era epidemiologic transitions and population dynamics and inequality and violence studies Focusing on these six major areas of burgeoning research within biocultural anthropology makes the proposed volume timely widely applicable and useful to scholars engaging in biocultural research and students interested in the biocultural approach and synthetic in its coverage of

contemporary scholarship in biocultural anthropology Students will be able to grasp the history of the biocultural approach and how that history continues to impact scholarship as well as the scope of current research within the approach and the foci of biocultural research into the future Importantly contributions in the text follow a consistent format of a discussion of method and theory relative to a particular aspect of the above six topics followed by a case study applying the surveyed method and theory This structure will engage students by providing real world examples of anthropological issues and demonstrating how biocultural method and theory can be used to elucidate and resolve them Key features include Contributions which span the breadth of approaches and topics within biological anthropology from the insights granted through work with ancient human remains to those granted through collaborative research with contemporary peoples Comprehensive treatment of diverse topics within biocultural anthropology from human variation and adaptability to recent disease pandemics the embodied effects of race and racism industrialization and the rise of allergy and autoimmune diseases and the sociopolitics of slavery and torture Contributions and sections united by thematically cohesive threads Clear jargon free language in a text that is designed to be pedagogically flexible contributions are written to be both understandable and engaging to both undergraduate and graduate students Provision of synthetic theory method and data in each contribution The use of richly contextualized case studies driven by empirical data Through case study driven contributions each chapter demonstrates how biocultural approaches can be used to better understand and resolve real world problems and anthropological issues

can adapt to external forces Furthermore bioarchaeological studies are multi scalar and can examine individuals groups or entire populations Using osteological indicators of activity patterns enthesal changes osteoarthritis and dietary isotopes carbon nitrogen as examples this book addresses patterns of everyday life in the ancient past Physical activities and food consumption are actions that are carried out on a daily basis While bioarchaeology does not have the ability to recreate specific day to day activities we can assess broad trends in everyday life The volume illustrates these points using examples from the Ancient Nile Valley Through the examination of over 800 Egyptian and Nubian individuals from five different archaeological sites the research addresses patterns of everyday life as they relate to social inequality agency and practice Beyond osteological indicators of activity and dietary patterns this book also discusses additional methods that can be pursued to draw attention to daily life Lastly this book also highlights the applicability of and potential contribution that practice theory can make to this area of research
