Faculty Health in Academic Medicine Thomas Cole, Thelma Jean Goodrich, Ellen R. Gritz, 2009-01-06

In the 21st century academic medical centers across the United States continue to make scientific breakthroughs to make improvements in patient care and to provide the most advanced information and guidance in matters affecting public health. The signs of growth are everywhere in new research buildings new partnerships with industry new forms of molecular medicine and new sensitivity to the role of the human spirit in healing. This growth is due in large part to the dedication and productivity of our faculty who are providing more patient care more research more teaching and more community service than ever before. Today there are roughly 135 000 physicians scientists and other faculty working at approximately 125 academic medical centers around the country. Increasingly they are asked to do more with less. Since the 1990s academic medical centers in the United States have lost the financial margin they once enjoyed thereby putting new pressures on research education and clinical care. Medical school faculty previously given funded time for teaching and research are increasingly drafted to bring in clinical revenues to cover their salaries. Dedicated to the missions of research teaching and care our faculty have responded well to these challenges and perform at a very high level. However we are beginning to see the results of ongoing stress.

The Principles and Practice of Narrative Medicine Rita

Charon, 2017 *The Principles and Practice of Narrative Medicine* articulates the ideas, methods and practices of narrative medicine. Written by the originators of the field, this book provides the authoritative starting place for any clinicians or scholars committed to learning of and eventually teaching or practicing narrative medicine. **Narrative in Health Care**

John D. Engel, Joseph Zarconi, Lura Pethtel, Sally Missimi, 2017-11-22 Narrative medicine has developed an identity already. Clinicians of many disciplines are being summoned to a practice that recognizes patients by receiving their accounts of self. Starting from different positions, the four authors have converged in a strong and shared commitment to narrative health care. They conceptualize narrative health care practices within frameworks derived from the social sciences and psychology and to a lesser degree phenomenology and autobiographical theory. They relate the development of narrative medicine to relationship-centered care, patient-centered care, and complex responsive process of relating theory, positing that narrative medicine can help clinicians to develop the skills required to practice relationship-centered care. The book details with exercises, resource texts, and abundant scholarly apparatus how these skills can be developed and strengthened. This work will change health care. Because of its scholarly rigor, its multi-voiced sources, and its highly practical features, lists, activities, key ideas, and key references, primary texts written by health care professionals and patients, this work will be a guide in the field for those who practice medicine or nursing or social work. The book establishes that there is a field to be practised, a need to practise it, and a means to develop the wherewithal to do so. **Illness Narratives in Practice: Potentials and Challenges of Using Narratives in Health-Related Contexts**

Gabriele Lucius-Hoene, Christine Holmberg, Thorsten Meyer, 2018 Comprehensive overview of illness narratives in practice, divided into eight distinct parts. The clear layout allows the readers to focus on the area essential to them and get a comprehensive overview and reflective stance of narratives in that field. **Bioethics in Cultural Contexts** Christoph Rehmann-Sutter, Marcus Düwell, Dietmar Mieth, 2006-03-08

CHRISTOPH REHMANN SUTTER, MARCUS DÜWELL, DIETMAR MIETH When we placed finitude limits of human existence as a motto over a round of discussion on biomedicine and bioethics which led to this collection of essays, we did not know how far this would lead us into methodological quandaries. However, we felt intuitively that an interdisciplinary approach including social and cultural sciences would have an advantage over a solely disciplinary philosophical or theological analysis. Bioethics, if it is to have adequate discriminatory power, should include sensitivity to the cultural contexts of biomedicine and also to the cultural contexts of bioethics itself. Context awareness, of course, is not foreign to philosophical or theological bioethics for the simple reason that the issues tackled in the debates, as in other fields of ethics, could not be adequately understood outside their contexts. Moral issues are always accompanied by contexts. When we try to unpack them, which is necessary to make them accessible to ethical discussion, we are regularly confronted with the fact that in removing too much of the context, we do not clarify an issue but make it less comprehensible. The context, at least some essential parts of it, is intrinsic to the issue. Unpacking in ethics is therefore a different procedure. It does not mean peeling the context off but rather identifying which

contextual elements are essential for an understanding of the key moral aspects of the issue and explaining how they establish its particular character

Moral Leadership in Medicine Suzanne Shale, 2011-12-22 What are the moral challenges that confront doctors as they manage healthcare institutions How do we build trust in medical organisations How do we conceptualize moral action Based on accounts given by senior doctors from organisations throughout the UK this book discusses the issues medical leaders find most troubling and identifies the moral tensions they face Moral Leadership in Medicine examines in detail how doctors protect patients interests implement morally controversial change manage colleagues in difficulty and rebuild trust after serious medical harm The book discusses how leaders develop moral narratives to make sense of these situations how they behave while balancing conflicting moral goals and how they influence those around them to do the right thing in difficult circumstances Based on empirical ethical analysis this volume is essential reading for clinicians in leadership roles and students and academics in the fields of healthcare management medical law and healthcare ethics
