The Temporalization of Time Mike Sandbothe, 2001-10-31 The subject of time is currently experiencing a revival in the most diverse areas of academic discourse Contemporary time theory attempts to relate theoretical time concepts both to one another and to everyday experience of time This book deals with the philosopher Martin Heidegger and the chemist Ilya Prigogine Nobel Prize for Chemistry 1977 two prominent advocates of pioneering time concepts in the 20th century The author not only provides a transdisciplinary introduction to modern debate on the problem of time but suggests how the basic tendencies in this debate might be pragmatically interlinked with each other

Meaning Takes Time to Unfold: Towards a Heideggerian Ontology of Temporal Differentiation Renxiang Liu, 2025-03-29 This book proposes a reconsideration of the intertwinement of time meaning and the piecemeal unfolding of things It gives a phenomenological ontological account of the time horizon at work in each being's manifestation explores the notion of time as a productive resistance in this manifestation and redefines human finitude and subjectivity accordingly to enable an attentive mode of waiting for meaning The discussion is significantly informed by but not limited to the works of Martin Heidegger and thus responds to the question of the turn in Heidegger's career by suggesting a systematic framework centered upon a generalized finitude of Being as such which may have consistently underlain Heidegger's thinking before and after the turn As subjectivity receives a qualified affirmation in the book in contrast to both subjectivist voluntarism and impersonalism this text also opens up the possibility to think of the plurality of human beings as essential to being human While the book is a continuation of a few traditions in continental philosophy which takes time philosophically seriously it is distinctive in not considering time abstractly but always situating its conceptualization in the context of what it means for a thing or an event to be Instead of a mere measure of change an itself invariant structure of happening or a new metaphysical absolute time is interpreted here as the way beings are The interpretation comes from and seeks to do justice to the basic experience of time bringing about wonder fulfillment or disappointment The book appeals to students and researchers working on Heidegger scholarship phenomenology and more generally the philosophy of time and subjectivity It inspires a patience for meaning in mortal transience to find dignity and beauty in what will eventually expire that is in life as such

Social Acceleration Hartmut Rosa, 2013-05-14 Hartmut Rosa advances an account of the temporal structure of society from the perspective of critical theory He identifies in particular three categories of change in the tempo of modern social life technological acceleration evident in transportation communication and production the acceleration of social change reflected in cultural knowledge social institutions and

personal relationships and acceleration in the pace of life which happens despite the expectation that technological change should increase an individual's free time According to Rosa both the structural and cultural aspects of our institutions and practices are marked by the shrinking of the present a decreasing time period during which expectations based on past experience reliably match future results and events When this phenomenon combines with technological acceleration and the increasing pace of life time seems to flow ever faster making our relationships to each other and the world fluid and problematic It is as if we are standing on slipping slopes a steep social terrain that is itself in motion and in turn demands faster lives and technology As Rosa deftly shows this self-reinforcing feedback loop fundamentally determines the character of modern life
