Cinema of Simulation: Hyperreal Hollywood in the Long 1990s Randy Laist,2016-09-22 Hyperreality is an Alice in Wonderland dimension where copies have no originals simulation is more real than reality and living dreams undermine the barriers between imagination and objective experience The most prominent philosopher of the hyperreal Jean Baudrillard formulated his concept of hyperreality throughout the 1980s but it was not until the 1990s that the end of the Cold War along with the proliferation of new reality bending technologies made hyperreality seem to come true In the lost decade between the fall of the Berlin Wall and 9 11 the nature of reality itself became a source of uncertainty a psychic condition that has

Foreword written by Jürgen Drews. Plants' Responses to Novel Environmental Pressures Alessio Fini, Massimiliano Tattini, Raquel Esteban, 2018-02-01. Plants have been exposed to multiple environmental stressors on long-term seasonal and short-term daily basis since their appearance on land. However, the frequency and the intensity of stress events have increased much during the last three decades because of climate change. Plants have developed, however, a multiplicity of modular and highly integrated strategies to cope with challenges imposed by novel, usually harsher environments. These strategies include migration, acclimation, and adaptation. Twelve articles in this research topic exactly focus on the relative significance of these response mechanisms for the successful acclimation of plants to a wide range of novel environmental pressures. Four articles additionally explore how plants respond to severe stress conditions resulting from the concurrent action of multiple stressors. Ten articles mostly examine how morpho-anatomical, physiological, and biochemical related traits integrate when plants suffer from novel threats such as solid, gaseous, and electromagnetic pollutants. Suitable physiological indicators for developing conservation strategies are described in the last two works. This research topic highlights that bottom-up as well as top-down approaches will be necessary to develop in near future in the study of plants' responses to environmental pressures. **Novel Molecular Mechanisms and Innovative Therapeutic Approaches for Age-Associated Diseases** Leming Sun, Zhe-Sheng Chen, Zhen Fan, 2022-06-03.
